

MGA-635T6

GPS Low Noise Amplifier with Variable Bias Current and Shutdown Function

Data Sheet

Description

Avago Technologies' MGA-635T6 is a LNA designed for GPS/ISM/Wimax applications in the (0.9-2.4)GHz frequency range. The LNA uses Avago Technologies' proprietary GaAs Enhancement-mode pHEMT process to achieve high gain operation with very low noise figures and high linearity. Noise figure distribution is very tightly controlled. Gain and supply current are guaranteed parameters. A CMOS compatible shutdown pin is included to turn the LNA off and provide a variable bias.

The MGA-635T6 LNA is useable down to 1V operation. It achieves low noise figures and high gain even at 1V, making it suitable for use in critical low power GPS/ISM band applications.

Features

- Low Noise Figure : 0.74dB
- High Gain : 14.5dB
- High linearity and P1dB
- GaAs E-pHEMT Technology
- Low component count
- Wide Supply Voltage : 1V to 3.6V
- Shutdown current : < 0.1uA
- CMOS compatible shutdown pin (VSD) current @ 2.85V : 60uA
- Adjustable bias current via one single external resistor/voltage
- Shutdown function
- Small Footprint: 2 x 1.3mm²
- Low Profile : 0.4 mm
- Ext matching for non-GPS freq band operation

Specifications

At 1.575GHz, 2.85V 6.3mA (Typ)

Gain = 14.5 dB (Typ)

NF = 0.74 dB (Typ)

IIP3 = 3.5 dBm (Typ)

IP1dB = 2.5 dBm (Typ)

S11 = -8 dB (Typ)

S22 = -10.4 dB (Typ)

At 1.575GHz, 2.85V 8mA (Typ)

Gain = 15.7 dB (Typ)

NF = 0.8 dB (Typ)

IIP3 = 3.5 dBm (Typ)

IP1dB = 1 dBm (Typ)

S11 = -11.8 dB (Typ)

S22 = -9.3 dB (Typ)

Applications

- GPS, ISM & WiMax Bands LNA

Notes

1. L1 and L2 form the input matching network. The LNA module has a built-in coupling and DC-block capacitor at the input and output. Best noise performance is obtained using high-Q wirewound inductors. This circuit demonstrates that low noise figures are obtainable with standard 0402 chip inductors. Replacing L1, L2 and L3 with high-Q wirewound inductors (eg. Cilcraft 0402CS series) will yield 0.1dB lower NF and 0.2dB higher Gain.
2. L3 is an output matching inductor.
3. C1 is a RF bypass capacitor.
4. PRL1 is a network that isolates the measurement demoboard from external disturbances. C2 and C3 mitigates the effect of external noise pickup on the VSD and VDD lines. These components are not required in actual operation.
5. Bias control is achieved by either varying the VSD voltage without R1 or fixing the VSD voltage to VDD and varying R1. Typical value for R1 is 22k Ohm for 5mA total current at VDD=+2.85V.
