## MIXED SIGNAL MICROCONTROLLER

---

### FEATURES

- **Ultra-Low Supply Voltage (ULV) Range**
  - 0.9 V to 1.5 V (1 MHz)
  - 1.5 V to 1.65 V (4 MHz)
- **Low Power Consumption**
  - Active Mode (AM): 45  $\mu$ A/MHz (1.3 V)
  - Standby Mode (LPM3, WDT\_A Mode): 6  $\mu$ A
  - Off Mode (LPM4): 3  $\mu$ A
- **Wake-Up From LPMx in Less Than 5  $\mu$ s**
- **16-Bit RISC Architecture**
  - Extended Instructions
  - Up to 4-MHz System Clock
- **Compact Clock System**
  - 1-MHz Internal Trimmable High-Frequency Clock
  - 20-kHz Internal Low-Frequency Clock Source
  - External Clock Input
- **16-Bit Timer0\_A3 With Three Capture/Compare Registers**
- **16-Bit Timer1\_A3 With Three Capture/Compare Registers**
- **ULV Analog Pool Modes**
  - 8-Bit Analog-to-Digital Converter (ADC)
  - 8-Bit Digital-to-Analog Converter (DAC)
  - Programmable Comparator (COMP)
  - Supply Voltage Monitor (SVM)
  - Temperature Sensor
  - Internal Reference Voltage Source
- **ULV Port Logic**
  - $V_{OL}$  Better Than 0.15 V at 2.5 mA
  - $V_{OH}$  Better Than  $V_{CC} - 0.15$  V at 1 mA
  - Timer0 PWM Signal Available on All Ports
  - Timer1 PWM Signal Available on All Ports
- **ULV Brownout Circuit (BOR)**
- **ULV RAM Retention Voltage Below BOR Level**
- **32-Bit Watchdog Timer (WDT-A)**
- **Bootstrap Loader in MSP430L092 Development/Prototyping Device**
- **Full Four-Wire JTAG Debug Interface**
- **Family Members Include**
  - **MSP430C091**
    - 1KB ROM Memory
    - 128 Bytes RAM + 96 Bytes CRAM (Lockable)
  - **MSP430C092**
    - 2KB ROM Memory
    - 128 Bytes RAM + 96 Bytes CRAM (Lockable)
  - **MSP430L092**
    - 2KB Loader ROM With Service Functions
    - 2KB RAM (1792 + 128 + 96 Bytes Lockable)
- **For Complete Module Descriptions, See the *MSP430x09x Family User's Guide (SLAU321)***

### DESCRIPTION

The Texas Instruments MSP430 family of ultra-low-power microcontrollers consists of several devices featuring different sets of peripherals targeted for various applications. The architecture, combined with five low-power modes, is optimized to achieve extended battery life in portable measurement applications. The device features a powerful 16-bit RISC CPU, 16-bit registers, and constant generators that contribute to maximum code efficiency. The digitally controlled internal oscillators allow wake-up from low-power modes to active mode in less than 5  $\mu$ s.

The MSP430C09x and MSP430L092 series are microcontroller configurations with two 16-bit timers, an ultra-low-voltage 8-bit analog-to-digital (A/D) converter, an 8-bit digital-to-analog (D/A) converter, and up to 11 I/O pins.

Typical applications for this device include single-cell systems requiring a full analog signal chain.

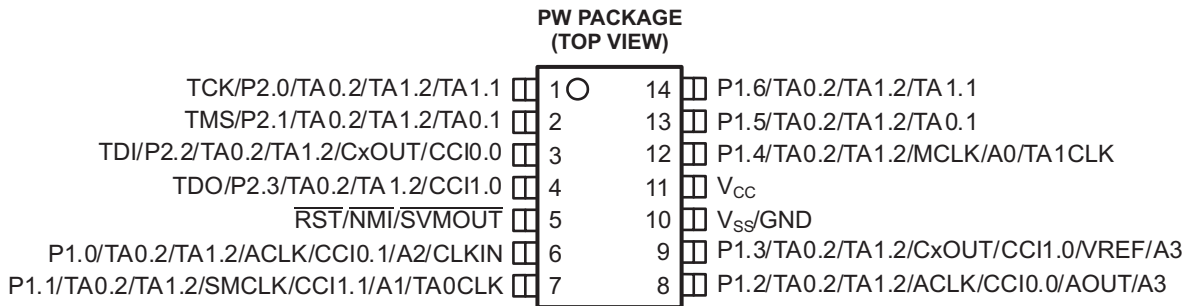

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

## SHORT-FORM DESCRIPTION

### CPU

The MSP430 CPU has a 16-bit RISC architecture that is highly transparent to the application. All operations, other than program-flow instructions, are performed as register operations in conjunction with seven addressing modes for source operand and four addressing modes for destination operand.

The CPU is integrated with 16 registers that provide reduced instruction execution time. The register-to-register operation execution time is one cycle of the CPU clock.

Four of the registers, R0 to R3, are dedicated as program counter, stack pointer, status register, and constant generator respectively. The remaining registers are general-purpose registers.

Peripherals are connected to the CPU using data, address, and control buses, and can be handled with all instructions.

### Instruction Set

The instruction set consists of the original 51 instructions with three formats and seven address modes. Each instruction can operate on word and byte data. [Table 2](#) shows examples of the three types of instruction formats, [Table 3](#) shows the address modes.

Program Counter	PC/R0
Stack Pointer	SP/R1
Status Register	SR/CG1/R2
Constant Generator	CG2/R3
General-Purpose Register	R4
General-Purpose Register	R5
General-Purpose Register	R6
General-Purpose Register	R7
General-Purpose Register	R8
General-Purpose Register	R9
General-Purpose Register	R10
General-Purpose Register	R11
General-Purpose Register	R12
General-Purpose Register	R13
General-Purpose Register	R14
General-Purpose Register	R15

**Table 2. Instruction Word Formats**

Dual operands, source-destination	e.g., ADD R4,R5	R4 + R5 → R5
Single operands, destination only	e.g., CALL R8	PC→(TOS), R8 →PC
Relative jump, un/conditional	e.g., JNE	Jump-on-equal bit = 0

**Table 3. Address Mode Descriptions**

ADDRESS MODE	S <sup>(1)</sup>	D <sup>(1)</sup>	SYNTAX	EXAMPLE	OPERATION
Register	•	•	MOV Rs, Rd	MOV R10, R11	R10 → R11
Indexed	•	•	MOV X(Rn), Y(Rm)	MOV 2(R5), 6(R6)	M(2+R5)→ M(6+R6)
Symbolic (PC relative)	•	•	MOV EDE, TONI		M(EDE) → M(TONI)
Absolute	•	•	MOV & MEM, & TCDAT		M(MEM) → M(TCDAT)
Indirect	•		MOV @Rn, Y(Rm)	MOV @R10, Tab(R6)	M(R10) → M(Tab+R6)
Indirect autoincrement	•		MOV @Rn+, Rm	MOV @R10+, R11	M(R10) → R11 R10 + 2 → R10
Immediate	•		MOV #X, TONI	MOV #45, TONI	#45 → M(TONI)

(1) S = source D = destination

## Operating Modes

The MSP430 has one active mode and five software-selectable low-power modes of operation. An interrupt event can wake up the device from any of the five low-power modes, service the request, and restore back to the low-power mode on return from the interrupt program.

The following six operating modes can be configured by software:

- Active mode (AM)
  - All clocks are active
- Low-power mode 0 (LPM0)
  - CPU is disabled
  - ACLK and SMCLK remain active for all sources
  - MCLK is disabled
- Low-power mode 1 (LPM1)
  - CPU is disabled
  - ACLK and SMCLK remain active (for LF oscillator and CLKIN as source, HF oscillator is mapped to LF oscillator as source)
  - MCLK is disabled
- Low-power mode 2 (LPM2)
  - CPU is disabled
  - MCLK is disabled
  - SMCLK is disabled
  - ACLK remains active for all sources
- Low-power mode 3 (LPM3)
  - CPU is disabled
  - MCLK is disabled
  - SMCLK is disabled
  - ACLK remains active (for LF oscillator and CLKIN as source, HF oscillator is mapped to LF oscillator as source)
- Low-power mode 4 (LPM4)
  - CPU is disabled
  - MCLK is disabled
  - SMCLK is disabled
  - ACLK is disabled
  - Oscillators are stopped

### LPM2 vs LPM3

If only MCLK is feed by the HF oscillator (SELA  $\neq$  00, SELS  $\neq$  00, SELM = 00 of CCCTL4 register) the following behavior is implemented:

- Entering LPM2 turns off the HF oscillator and starts again with the HF oscillator selected for MCLK
- Entering LPM3 turns off the HF oscillator and starts again with the LF oscillator selected for MCLK

The only difference between LPM2 and LPM3 is the selection of the source for MCLK when re-entering active mode and, therefore, and the level of power savings.

## Interrupt Vector Addresses

The interrupt vectors and the power-up start address are located in the address range 0FFFFh to 0FFE0h. The vector contains the 16-bit address of the appropriate interrupt-handler instruction sequence.

**Table 4. Interrupt Sources, Flags, and Vectors**

INTERRUPT SOURCE	INTERRUPT FLAG	SYSTEM INTERRUPT	WORD ADDRESS	PRIORITY
System Reset Power-Up External Reset Watchdog	WDTIFG <sup>(1)</sup>	Reset	0x0FFFE	15, highest
System NMI Vacant memory access	SVMIFG, VMAIFG <sup>(1)</sup>	(Non)maskable	0x0FFFC	14
User NMI NMI	NMIIFG <sup>(1)(2)</sup>	(Non)maskable	0x0FFFA	13
Timer1_A3	TA1CCR0 CCIFG0 <sup>(3)</sup>	Maskable	0x0FFF8	12
Timer1_A3	TA1CCR1 CCIFG1 <sup>(1)(3)</sup>	Maskable	0x0FFF6	11
Watchdog Timer_A Interval Timer Mode	WDTIFG	Maskable	0x0FFF4	10
A-Pool	CxIFG	Maskable	0x0FFF2	9
I/O Port P1	P1IFG.0 to P1IFG.6 <sup>(1)(3)</sup>	Maskable	0x0FFF0	8
Timer0_A3	TA0CCR0 CCIFG0 <sup>(3)</sup>	Maskable	0x0FFEE	7
Timer0_A3	TA0CCR1 CCIFG1 <sup>(1)(3)</sup>	Maskable	0x0FFEC	6
I/O Port P2	P2IFG.0 to P2IFG.3 <sup>(1)(3)</sup>	Maskable	0x0FFEA	5
Reserved	Reserved <sup>(4)</sup>		0x0FFE8	4
			⋮	⋮
			0x0FFE0	0

- (1) Multiple source flags
- (2) A reset is generated if the CPU tries to fetch instructions from within peripheral space or vacant memory space. (Non)maskable: the individual interrupt-enable bit can disable an interrupt event, but the general-interrupt enable cannot disable it.
- (3) Interrupt flags are located in the module.
- (4) Reserved interrupt vectors at addresses are not used in this device and can be used for regular program code if necessary. To maintain compatibility with other devices, it is recommended to reserve these locations.

## Special Function Registers (SFRs)

The MSP430 SFRs are located in the lowest address space and can be accessed via word or byte formats.

<b>Legend</b>	rw:	Bit can be read and written.
	rw-0,1:	Bit can be read and written. It is reset or set by PUC.
	rw-(0,1):	Bit can be read and written. It is reset or set by POR.
		SFR bit is not present in device.

### Interrupt Enable 1

15	14	13	12	11	10	9	8
							<b>SVMIE</b>
r0	r0	r0	r0	r0	r0	r0	rw-0
7	6	5	4	3	2	1	0
<b>JMBOUTIE</b>	<b>JMBINIE</b>		<b>NMIIE</b>	<b>VMAIE</b>		<b>OFIE</b>	<b>WDTIE</b>
rw-0	rw-0	r0	rw-0	rw-0	r0	rw-0	rw-0

**SVMIE** SVM interrupt enable

**JMBOUTIE**

**JMBINIE**

**NMIIE** Nonmaskable-interrupt enable

**VMAIE** Vacant memory access interrupt enable

**OFIE**

**WDTIE** Watchdog-timer interrupt enable. Inactive if watchdog mode is selected. Active if watchdog timer is configured as a general-purpose timer.

### Interrupt Enable 2

15	14	13	12	11	10	9	8
							<b>SVMIFG</b>
r0	r0	r0	r0	r0	r0	r0	rw-0
7	6	5	4	3	2	1	0
<b>JMBOUTIFG</b>	<b>JMBINIFG</b>		<b>NMIIFG</b>	<b>VMAIFG</b>		<b>OFIFG</b>	<b>WDTIFG</b>
rw-0	rw-0	r0	rw-0	rw-0	r0	rw-0	rw-0

**SVMIFG** Set by SVM when voltage falls below set voltage

**JMBOUTIFG**

**JMBINIFG**

**NMIIFG** Set via  $\overline{\text{RST/NMI}}$  pin

**VMAIFG** Set on vacant memory access

**OFIFG**

**WDTIFG** Set on watchdog timer overflow (in watchdog mode) or security key violation  
Reset on  $V_{CC}$  power-on or a reset condition at the  $\overline{\text{RST/NMI}}$  pin in reset mode

### Reset Pin Control Register

15	14	13	12	11	10	9	8
r0	r0	r0	r0	r0	r0	r0	r0
7	6	5	4	3	2	1	0
r0	r0	r0	r0	<b>SYSRSTRE</b>	<b>SYSRSTUP</b>	<b>SYSNMIES</b>	<b>SYSNMI</b>
r0	r0	r0	r0	r1	r1	r1	rw-0

- SYSRSTRE** Indicates resistor present on  $\overline{RST}$  pin
- SYSRSTUP** Indicates pullup on  $\overline{RST}$  pin
- SYSNMIES** Indicates NMI edge select
- SYSNMI** NMI enable on  $\overline{RST}/\overline{NMI}$  pin

## Memory Organization

Table 5. Memory Organization

	TYPE	MSP430C091	MSP430C092	MSP430L092	MSP430L092 (EMU) <sup>(1)</sup>

CRAM memory (lockable)	RAM	96 B 0x01C00 – 0x01C5F	96 B 0x01C00 – 0x01C5F	96 B 0x01C00 – 0x01C5F	128 B <sup>(3)</sup> 0x0F880 – 0x0F8FF
Peripherals	Size	4 kB 0x00000 – 0x00FFF	4 kB 0x00000 – 0x00FFF	4 kB 0x00000 – 0x00FFF	4 kB 0x00000 – 0x00FFF

(1) The MSP430L092 emulates the MSP430C092 device (MSP430C091 emulation via tool and software).

(2) Not the whole interrupt vector range of CSYS is used on MSP430x09x devices (see Table 4).

(3) Resets and interrupt redirections in RAM with alternate interrupt vectors cannot be emulated.

## Start-Up Code (SUC)

The MSP430C09x start-up code checks the password and releases control to the application or enables JTAG on password match, enters LPM4, and waits for a debug session. The behavior of the SUC is described in the *MSP430L092 Loader Code User's Guide* (SLAU324).

## Loader Code (Loader)

The MSP430L092 loader checks the presence of an external SPI/I2C memory device containing a valid code signature, loads validated code into the application LRAM, and starts the application. The loader program uses P1.2 with an external circuit to pump up the voltage required for SPI memory device readout. For complete description of the features of the loader and its implementation, see the *MSP430L092 Loader Code User's Guide* (SLAU324).

## RAM Memory

The RAM memory is split into three ranges for different purposes: application memory, lockable application memory, and calibration memory.

Lockable application memory and calibration memory can be protected against accidental erasure by setting a dedicated lock bit in the special functions register (System Maintenance Register).

## Peripherals

Peripherals are connected to the CPU through data, address, and control buses and can be handled using all instructions. For complete module descriptions, see the *MSP430x09x Family User's Guide* (SLAU321).

## Digital I/O

There are two I/O ports implemented: P1 (7 I/O lines) and P2 (4 I/O lines).

- All individual I/O bits are independently programmable.
- Any combination of input, output, and interrupt conditions is possible.
- Programmable pullup or pulldown on all ports.
- Edge-selectable interrupt input capability for all ports on P1 and P2.
- Read/write access to port-control registers is supported by all instructions.
- Ports can be accessed byte-wise (P1 and P2) or word-wise in pairs (P1/P2 combo).

## Oscillator and System Clock

The clock system in the MSP430x09x family of devices is supported by the Compact Clock System (CCS) module that includes support for an internal 20-kHz current-controlled low-frequency oscillator (LF-OSC), an internal adjustable 1-MHz current-controlled high-frequency oscillator (HF-OSC), and an external clock input from CLKIN; however, a missing CLKIN signal does not trigger an oscillator failsafe mechanism in this family.

The CCS module is designed to meet the requirements of both low system cost and low power consumption. The CCS provides a fast turn-on of the oscillators, less than 1 ms. The CCS module provides the following clock signals:

- Auxiliary clock (ACLK), sourced from the 20-kHz internal LF-OSC, the 1-MHz internal HF-OSC, or CLKIN.
- Main clock (MCLK), the system clock used by the CPU. MCLK can be sourced by same sources made available to ACLK.
- Sub-Main clock (SMCLK), the subsystem clock used by the peripheral modules. SMCLK can be sourced by same sources made available to ACLK.
- VLOCLK is an ultra-low-power low-frequency clock that is available as long the device is powered.

Figure 1. Compact Clock System (CCS) Block Diagram

### Watchdog Timer (WDT\_A)

The primary function of the watchdog timer (WDT\_A) module is to perform a controlled system restart after a software problem occurs. If the selected time interval expires, a system reset is generated. If the watchdog function is not needed in an application, the module can be configured as an interval timer and can generate interrupts at selected time intervals.

Table 6. WDT\_A Signal Connections

DEVICE CLOCK SIGNAL	MODULE CLOCK SIGNAL
ACLK	ACLK
SMCLK	SMCLK
LF-OSC-CLK	VLOCLK
LF-OSC-CLK	X-CLK

### Compact System Module (C-SYS)

The Compact SYS module handles many of the system functions within the device. These include power-on reset and power-up clear handling, NMI source selection and management, reset interrupt vector generators, and configuration management. It also includes a data exchange mechanism via JTAG called a JTAG mailbox that can be used in the application.

### RST/NMI/SVMOUT System

The reset system of the MSP430x09x family features the functions reset input, reset output, NMI input, SVM output, and SVS input.

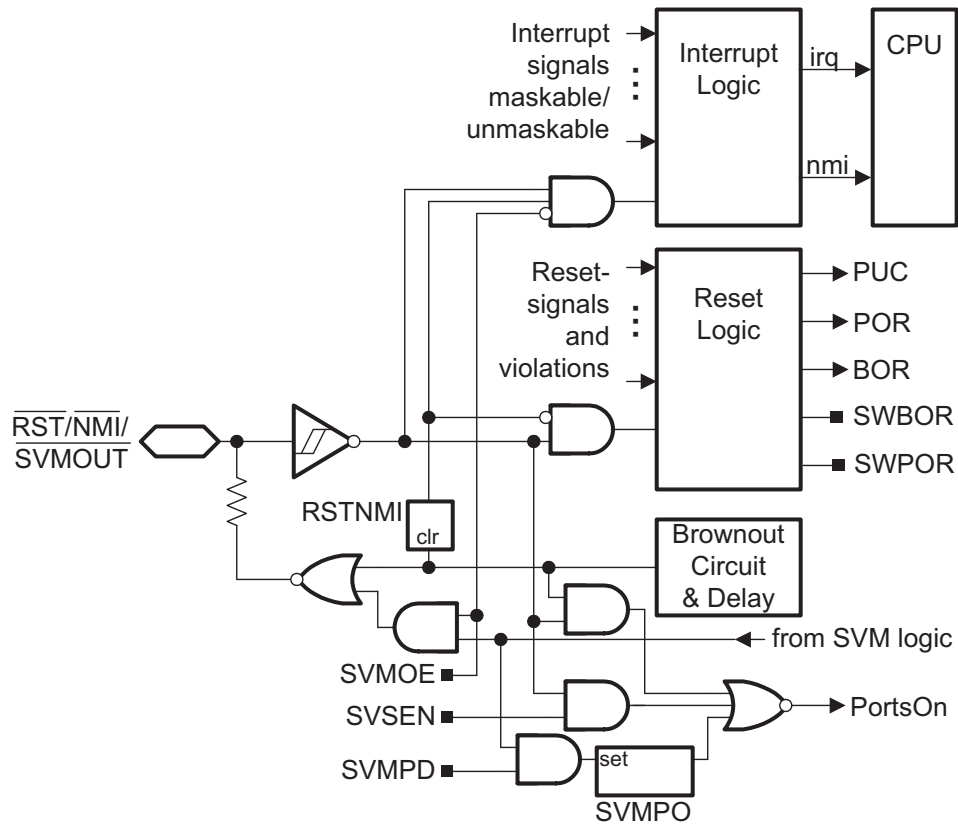

Figure 2. RST/NMI/SVMOUT and PortsOn Logic Block Diagram

**Table 7. System Module Interrupt Vector Registers**

INTERRUPT VECTOR REGISTER	INTERRUPT VECTOR	WORD ADDRESS	OFFSET	PRIORITY

**Timer0\_A3**

Timer0\_A3 is a 16-bit timer/counter with three capture/compare registers. Timer0\_A3 can support multiple capture/compares, PWM outputs, and interval timing. Timer0\_A3 also has extensive interrupt capabilities. Interrupts may be generated from the counter on overflow conditions and from each of the capture/compare registers.

**Table 8. Timer0\_A3 Signal Connections**

**Timer1\_A3**

Timer1\_A3 is a 16-bit timer/counter with three capture/compare registers. Timer1\_A3 can support multiple capture/compares, PWM outputs, and interval timing. Timer1\_A3 also has extensive interrupt capabilities. Interrupts may be generated from the counter on overflow conditions and from each of the capture/compare registers.

**Table 9. Timer1\_A3 Signal Connections**

INPUT PIN NUMBER	DEVICE INPUT SIGNAL	MODULE INPUT SIGNAL	MODULE BLOCK	MODULE OUTPUT SIGNAL	DEVICE OUTPUT SIGNAL	OUTPUT PIN NUMBER

### A-Pool

The analog functions pool (A-Pool) provides a series of functions that can be configured to a digital-to-analog converter (DAC), multichannel analog-to-digital converter (ADC), supply voltage supervisor (SVS), and comparator. Input voltage dividers and an internal reference source allow a wide range of combined analog functions.

Figure 3. A-Pool Block Diagram

## Versatile I/O Port P1, P2

The versatile I/O ports P1 and P2 feature device-dependent reset values. The reset values for the MSP430x09x devices are shown in [Table 10](#).

**Table 10. Versatile Port Reset Values**

PORT NUMBER	PxOUT	PxDIR	PxREN	PxSEL0	PxSEL1	RESET	PORTS ON	COMMENT
P1.0	0	0	0	0	0	PUC	yes	P1.0, input
P1.1	0	0	0	0	0	PUC	yes	P1.1, input
P1.2	0	0	0	0	0	PUC	yes	P1.2, input

## Absolute Maximum Ratings<sup>(1)</sup>

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

Voltage applied at $V_{CC}$ referenced to $V_{SS}$ ( $V_{AMR}$ )	–0.3 V to 1.90 V
Voltage applied to any pin (references to $V_{SS}$ )	–0.3 V to $V_{CC} + 0.3$ V
	–0.3 V to 1.90 V
Diode current at any device pin <sup>(2)</sup>	±2.5 mA
Current derating factor when I/O ports are switched in parallel electrically and logically <sup>(3)</sup>	0.9
Storage temperature range <sup>(4)</sup>	–55°C to 150°C
ESD tolerance, Human-Body Model (HBM)	2000 V

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages referenced to  $V_{SS}$ .
- (3) The diode current increases to ±4.5 mA when two pins are connected, ± 6.75 mA for three pins.
- (4) Higher temperature may be applied during board soldering according to the current JEDEC J-STD-020 specification with peak reflow temperatures not higher than classified on the device label on the shipping boxes or reels.

## Recommended Operating Conditions

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

		MIN	NOM	MAX	UNIT
$V_{CC}$	Supply voltage during program execution	0.9		1.65	V
$V_{SS}$	Supply voltage (GND reference)		0		V
$T_A$	Operating free-air temperature	0		50	°C
$C_{VCC}$	Capacitor on $V_{CC}$		470		nF
$f_{SYSTEM}^{(1)(2)}$	System operating frequency	$V_{CC} > 0.9$ V, $t_{LOW} \geq 450$ ns, $t_{HIGH} \geq 450$ ns		1	MHz
		$V_{CC} > 1.5$ V, $t_{LOW} \geq 113$ ns, $t_{HIGH} \geq 113$ ns		4	MHz

- (1) The MSP430 CPU is clocked directly with MCLK. Both the high and low phase of MCLK must not exceed the pulse width of the specified maximum frequency.
- (2) Modules may have a different maximum input clock specification. Refer to the specification of the respective module in this data sheet.

### Active Mode Supply Current (Into $V_{CC}$ ) Excluding External Current<sup>(1)(2)</sup>

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	$V_{CC}$	$T_A$	MIN	TYP	MAX	UNIT

$f_{LFOSC}$	$V_{CC} = 0.9\text{ V to }1.65\text{ V}$	6	20	45	kHz
Duty cycle	$V_{CC} = 0.9\text{ V to }1.65\text{ V}$	45	50	55	%
$t_{START}$	$V_{CC} = 0.9\text{ V to }1.65\text{ V}$			500	$\mu\text{s}$
$I_{OSC}$	$V_{CC} = 0.9\text{ V to }1.65\text{ V}, f_{LFOSC} = 20\text{ kHz}$		0.6		$\mu\text{A}$

**Typical Characteristics – Low-Frequency Oscillator**  
FREQUENCY vs TEMPERATURE

Figure 14.

## Brown-Out Reset (BOR)

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{BOR(Start)}$		490			mV
$V_{(BOR\_IT+)}$	$V_{CC}$ rising, $\Delta V_{CC}/\Delta t < 3\text{ V/s}$	1095		1150	mV
$V_{(BOR\_IT-)}$	$V_{CC}$ falling, $\Delta V_{CC}/\Delta t < 3\text{ V/s}$	860		900	mV
$V_{hys(BOR)}$			200		mV
$V_{MARGIN}$	$V_{MARGIN} = V_{(BOR\_IT-)} - V_{CRIT}$ , ( $V_{CRIT} < 820\text{ mV}$ ) <sup>(1)</sup>	40			mV
$t_d(BOR)$				3000 <sup>(2)</sup>	$\mu\text{s}$

- (1)  $V_{CRIT}$  is a temperature depending voltage where the single components of the device become unreliable (the 'L092 provides a safety margin to ensure overall device function).
- (2) Strongly depends on voltage ramp in system (actually a maximum typical value).

### A-POOL, External Reference Source

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
V <sub>REF</sub>	V <sub>CC</sub> = 0.9 V to 1.65 V, ADC / DAC operational	100		275	mV
	V <sub>CC</sub> = 0.9 V to 1.65 V, ADC / DAC not operational	0		V <sub>CC</sub>	V
I <sub>REF(Input)</sub>	V <sub>CC</sub> = 0.9 V to 1.65 V, load to external sinks		3		μA
C <sub>REF</sub>	REFON = 0	20		50	pF

### A-POOL, Built-In Reference Source

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
V <sub>REF</sub>	V <sub>CC</sub> = 0.9 V to 1.65 V (±1.5%, overall 3%)		256		mV
I <sub>REF</sub>	V <sub>CC</sub> = 0.9 V to 1.65 V		10		μA
C <sub>REF</sub>	REFON = 1	20		50	pF
T <sub>REF</sub>	V <sub>CC</sub> = 0.9 V to 1.65 V ( $\Delta V/\Delta T \times V_{REF}$ referenced to 25°C)		±250		ppm/°C
t <sub>SETTLE</sub>	V <sub>CC</sub> = 0.9 V to 1.65 V, REFON = 1, C <sub>REF</sub> = C <sub>REF(max)</sub> <sup>(1)</sup>		900 <sup>(1)</sup>		μs
I <sub>REF(Output)</sub>	V <sub>CC</sub> = 0.9 V to 1.65 V, REFON = 1, C <sub>REF</sub> = C <sub>REF(max)</sub>		2		μA

(1) As the actual on reference enable signal is synchronized with the LF oscillator.

### Typical Characteristics – A-POOL Built-In Reference Source VOLTAGE vs TEMPERATURE

Figure 15.

## A-POOL, Temperature Sensor

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$I_{\text{SENSOR}}$	$V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$		2		$\mu\text{A}$
$TC_{\text{SENSOR}}$	$V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$ , $T_A = 0^\circ\text{C to } 50^\circ\text{C}$ ( $\Delta V/\Delta T$ referenced to $30^\circ\text{C}$ )		464		$\mu\text{V}/^\circ\text{C}$
$V_{\text{OFFSET25}}$	$V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$ at $T_A = 30^\circ\text{C}$		179		mV
$t_{\text{SETTLE}}$	$V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$ (before start of conversion)			15	$\mu\text{s}$
$V_{\text{SENSOR}}^{(1)}$	$V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$ , $T_A = 0^\circ\text{C to } 50^\circ\text{C}$		179		mV

(1) This formula can be used to calculate the temperature sensor output voltage:  $V_{\text{SENSOR}} = V_{\text{OFFSET25}} + TC_{\text{SENSOR}} \times (T_A - 30^\circ\text{C})$ .

## A-POOL, Input Voltage Dividers

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$\Delta R_x/R_x$	Any $R_x$ in dividers		$\pm 1.5$		%
	Any $R_x$ across switches and internal supply voltage divider (by 4, by 8)		$\pm 2$		
RIN	On A0/A1, $VA0/VA1 = 0.5\text{V}$ , ADIV0/ADIV1 = 1 (500-mV range)	120	200	300	k $\Omega$
	On A2/A3, $VA2/VA3 = 0.5\text{V}$ , ADIV2/ADIV4 = 1 (1-V range)	80	133	190	
	On A2/A3, $VA2/VA3 = 0.5\text{V}$ , ADIV2+ADIV3/ADIV4+ADIV5 = 1 (2-V range)	70	114	150	
$\Delta I_{\text{VCC}}$	ADIV7 = 1 (supply voltage divider on)		2		$\mu\text{A}$

## A-POOL, DAC-8

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{\text{REF}}$	$V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$		256		mV
$t_{\text{SETTLE}}$	On $\pm 1$ LSB steps ( $6\tau$ ), $V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$ , external $V_{\text{REF}}$		2		$\mu\text{s}$
	Between all codes > 20 on AOUT ( $6\tau$ ), $V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$ , external $V_{\text{REF}}$		14		
EI	$V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$ , external $V_{\text{REF}}$ , add $\pm 7 \text{ mV}$ for $V_{\text{OUT}}$ offset <sup>(1)</sup> for codes > 7			$\pm 3$	LSB
ED	$V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$ , external $V_{\text{REF}}$ , add $\pm 7 \text{ mV}$ for $V_{\text{OUT}}$ offset <sup>(1)</sup> for codes > 7			$\pm 1$	LSB

(1) This offset can be compensated using software.

## A-POOL, Comparator

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{\text{IN}}$	$V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$	0		275	mV
$t_{\text{pd}}$	Overdrive = 20 mV			0.5	$\mu\text{s}$
	Overdrive = 5 mV			0.5	
	Overdrive = 1 mV			1	

## A-POOL, AOUT Terminal

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$ I_{\text{LOAD}} $	$V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$ , $C_{\text{LOAD}} = 25 \text{ pF}$	$V_{\text{OUT}} > 50 \text{ mV}$ (accuracy $\pm 1\%$ of $V_{\text{OUT}}$ )	5		$\mu\text{A}$
		$V_{\text{OUT}} > 20 \text{ mV}$ (accuracy $\pm 1\%$ of $V_{\text{OUT}}$ )	2		
$t_{\text{SETTLE}}$	$V_{\text{CC}} = 0.9 \text{ V to } 1.65 \text{ V}$ , $C_{\text{LOAD}} = 25 \text{ pF}$ , $\pm 1\%$ ( $6\tau$ ) (for AOUT 20 to 256 mV)			4	$\mu\text{s}$

## A-POOL, ADC-8 Counter

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$f_{CNT}$	$V_{CC} = 0.9\text{ V to }1.65\text{ V}$			1	MHz
$t_{CONV}$	Full conversion (all codes), $f_{CNT} = 1\text{ MHz}$		256		$\mu\text{s}$

## RAM

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{OP}$	Operating temperature $0^{\circ}\text{C to }70^{\circ}\text{C}$ , $f_{CPU} = 1\text{ MHz}$	900			mV
$V_{RET}$	Operating temperature $0^{\circ}\text{C to }70^{\circ}\text{C}$ (tracks BOL level)	700			mV

PORT SCHEMATICS

Port P1, P1.0 Input/Output

Table 12. Port P1 (P1.0) Pin Functions

PIN NAME (P1.x)	x	FUNCTION	CONTROL BITS/SIGNALS <sup>(1)</sup>			
			P1DIR.x	P1SEL1.x	P1SEL0.x	RSELx/ASE Lx

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
MSP430L092SPW	ACTIVE	TSSOP	PW	14	90	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	0 to 50	L092S	<a href="#">Samples</a>
MSP430L092SPWR	ACTIVE	TSSOP	PW	14	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	0 to 50	L092S	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - B. This drawing is subject to change without notice.
  - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0,15 each side.
  - D. Body width does not include interlead flash. Interlead flash shall not exceed 0,25 each side.
  - E. Falls within JEDEC MO-153

PW (R-PDSO-G14)

PLASTIC SMALL OUTLINE

4211284-2/G 08/15

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Publication IPC-7351 is recommended for alternate designs.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
