3 GHz HDMI 5:1 Transceiver with On-Screen Display

Data Sheet

ADV7627

FEATURES

- 5-input, 1-output HDMI transceiver
- HDMI support
  - 3 GHz video support (up to 4k × 2k)
  - Audio return channel (ARC)
  - 3D TV support
  - Content type bits
  - CEC 1.4-compatible
  - Extended colorimetry
- Character- and icon-based on-screen display (OSD)
  - 3D OSD overlay on all mandatory 3D formats
  - Support for OSD overlay on 3 GHz video formats
- High-bandwidth Digital Content Protection (HDCP 1.4)
- HDCP repeater support: up to 127 KSVs supported
- 300 MHz maximum TMDS clock frequency (up to 4k × 2k)
- 48-/36-/30-bit Deep Color input modes supported
- Ultralow jitter digital PLL (100% deskew)
- TTL pixel port input
  - Allows digital video input to facilitate analog video support
  - Interlaced-to-progressive converter
- HDMI receiver for 5 input ports
  - 3 GHz support on all inputs
  - Adaptive equalizer for cable lengths up to 30 meters
  - Flexible internal EDID RAM supports dual EDIDs
  - Replication of either dual EDID on any input port
  - 5 V detect inputs
  - Hot Plug assert control outputs
- HDMI transmitter
  - 3 GHz support on transmitter outputs
  - EDID data extraction
  - Hot Plug detect (HPD) inputs
  - Audio return channel (ARC) receiver
  - 3 GHz color space converter (CSC)
- Audio
  - HDMI-compatible audio interface
  - 8-channel audio extraction port
  - 8-channel audio insertion port
  - S/PDIF (IEC 60958-compatible) digital audio input/output
  - Super Audio CD® (SACD) with DSD input/output interface
  - High bit rate (HBR) audio
  - Dolby® TrueHD
  - DTS-HD Master Audio™
  - Full audio input and output support
- General
  - Interrupt controller
  - Standard identification (STDI) circuit
  - Software libraries, driver, and application available

APPLICATIONS

- AVR
- HTiB
- Soundbar with HDMI repeater support
- Other repeater applications

REVISION HISTORY

12/13—Revision 0: Initial Version

GENERAL DESCRIPTION

The ADV7627 is a high performance, five-input, one-output, High-Definition Multimedia Interface (HDMI®) transceiver. The ADV7627 supports 3 GHz video and features one HDMI receiver, one HDMI transmitter, an audio output port, an audio input port, and a pixel port input. The ADV7627 supports all HDCP repeater functions through fully tested Analog Devices, Inc., repeater software libraries and drivers.

The HDMI receiver and transmitter in the ADV7627 support the reception and transmission of 3 GHz video formats up to 4k × 2k at 24 Hz/25 Hz/30 Hz, in addition to all mandatory HDMI 3D TV formats. The receiver and transmitter also provide support for THX® Media Director™.

The HDMI receiver features an integrated equalizer that ensures robust operation of the interface with cable lengths up to 30 meters. The HDMI receiver has a 768-byte volatile extended display identification data (EDID) memory, which can facilitate one or two EDIDs. Each HDMI port features dedicated 5 V detect and Hot Plug™ assert pins.

The HDMI transmitter supports audio return channel (ARC) and features an integrated HDMI CEC controller that supports capability discovery and control (CDC).

The ADV7627 offers an audio output port and an audio input port. Each audio port supports the extraction and insertion of up to eight channels of audio data out of or into the HDMI streams. HDMI audio formats, including I^2S, S/PDIF, direct stream digital (DSD), and high bit rate (HBR) audio are supported.

The ADV7627 features a TTL pixel port input that facilitates the reception of digital video data from an analog front-end decoder (for example, the ADV7180, ADV7181D, or ADV7842).

The ADV7627 has an integrated on-screen display (OSD) generator that enables the creation and control of high quality character- and icon-based system status and control displays. The OSD can be overlaid on 3 GHz video formats and 3D video. Customers who are interested in using OSD are provided with Blimp, the Analog Devices OSD development tool.

The ADV7627 is provided in a space-saving, 260-ball, 15 mm × 15 mm CSP_BGA surface-mount, RoHS-compliant package and is specified over the 0°C to 70°C temperature range.

DETAILED FUNCTIONAL BLOCK DIAGRAM

SPECIFICATIONS

AVDD_TX = 1.8 V ± 5%, CVDD = 1.8 V ± 5%, DVDD = 1.8 V ± 5%, DVDDIO = 3.3 V ± 5%, PVDD = 1.8 V ± 5%, PVDD_TX = 1.8 V ± 5%, TVDD = 3.3 V ± 5%, T_{MIN} to T_{MAX} = 0°C to 70°C.

DIGITAL, HDMI, AND AC SPECIFICATIONS

Table 1.

Parameter	Test Conditions/Comments	Min	Typ	Max	Unit
DIGITAL INPUTS					
Input High Voltage (V_{IH})		2			V
Input Low Voltage (V_{IL})				0.8	V
Input Leakage Current (I_{IN})		−60		+60	µA
Input Capacitance (C_{IN})				20	pF
DIGITAL INPUTS (5 V TOLERANT)[1]					
Input High Voltage (V_{IH})		2.85			V
Input Low Voltage (V_{IL})				0.8	V
Input Leakage Current (I_{IN})	RXA_5V, RXB_5V, RXC_5V, RXD_5V, RXE_5V	−450		+450	µA
	All other 5 V tolerant digital inputs	−60		+60	µA
DIGITAL OUTPUTS					
Output High Voltage (V_{OH})		2.4			V
Output Low Voltage (V_{OL})				0.4	V
High Impedance Leakage Current (I_{LEAK})			10		µA
Output Capacitance (C_{OUT})				20	pF
DIGITAL OUTPUTS (5 V TOLERANT)[2]					
Output High Voltage (V_{OH})		4.85			V
Output Low Voltage (V_{OL})				0.4	V
AC SPECIFICATIONS					
TMDS Input Clock Range		25		300	MHz
TMDS Output Clock Frequency		25		300	MHz

[1] The following pins are 5 V tolerant inputs: DDC_SCL_RXA, DDC_SDA_RXA, DDC_SCL_RXB, DDC_SDA_RXB, DDC_SCL_RXC, DDC_SDA_RXC, DDC_SCL_RXD, DDC_SDA_RXD, DDC_SCL_RXE, DDC_SDA_RXE, RXA_5V, RXB_5V, RXC_5V, RXD_5V, RXE_5V, CEC, DDC_SCL_TX, DDC_SDA_TX, TX_HPD_ARC−, and TX_ARC+.
[2] The following pins are 5 V tolerant outputs: RXA_HPA, RXB_HPA, RXC_HPA, RXD_HPA, and RXE_HPA.

DATA AND I²C TIMING CHARACTERISTICS

Table 2.

Parameter	Symbol	Test Conditions/Comments	Min	Typ	Max	Unit
VIDEO SYSTEM CLOCK AND XTAL						
Crystal Nominal Frequency				27.0		MHz
Crystal Frequency Stability					±50	ppm
External Clock Source		External crystal must operate at 1.8 V				
Input High Voltage	V_{IH}	XTAL driven with external clock source	1.2			V
Input Low Voltage	V_{IL}	XTAL driven with external clock source			0.4	V
Pixel Port Input Clock Frequency Range		Interlaced-to-progressive converter not enabled	13.5		148.5	MHz
		Interlaced-to-progressive converter enabled (480i, 576i)			13.5	MHz
Serial Port EP_SCLK Frequency					27	MHz
Audio SCLK Frequency					49.152	MHz
Audio MCLK Frequency					98.304	MHz
Audio DSD Clock Frequency					5.6448	MHz
RESET FEATURE						
Reset Pulse Width			5			ms
I²C PORTS (FAST MODE)						
xCL Frequency[1]					400	kHz
xCL Minimum Pulse Width High[1]	t_1		600			ns
xCL Minimum Pulse Width Low[1]	t_2		1.3			µs
Start Condition Hold Time	t_3		600			ns
Start Condition Setup Time	t_4		600			ns
xDA Setup Time[2]	t_5		100			ns
xCL and xDA Rise Time[1, 2]	t_6				300	ns
xCL and xDA Fall Time[1, 2]	t_7				300	ns
Setup Time (Stop Condition)	t_8		0.6			µs
SERIAL PORT, MASTER MODE[3, 4]		SPI Mode 0				
EP_$\overline{CS}$ Falling Edge to EP_SCLK Rising/Falling Edge	t_9, t_{10}		1 × EP_SCLK periods		1.5 × EP_SCLK periods	ns
EP_SCLK Rising/Falling Edge to EP_$\overline{CS}$ Rising Edge	t_{11}, t_{12}		1 × EP_SCLK periods		1.5 × EP_SCLK periods	ns
EP_$\overline{CS}$ Pulse Width[5]	t_{13}		1000			ns
EP_SCLK High Time	t_{14}		40		60	% duty cycle
EP_SCLK Low Time			40		60	% duty cycle
EP_MOSI Start of Data Invalid to EP_SCLK Falling Edge	t_{15}				0	ns
EP_$\overline{CS}$ Start of Data Invalid to EP_SCLK Falling Edge	t_{15}				0	ns
EP_SCLK Falling Edge to EP_MOSI End of Data Invalid	t_{16}				2.15	ns
EP_SCLK Falling Edge to EP_$\overline{CS}$ End of Data Invalid	t_{16}				2.15	ns
EP_MISO Setup Time	t_{17}	Valid regardless of the EP_SCLK active edge used	7.5			ns
EP_MISO Hold Time	t_{18}	Valid regardless of the EP_SCLK active edge used	0			ns

Parameter	Symbol	Test Conditions/Comments	Min	Typ	Max	Unit
SERIAL PORT, SLAVE MODE[3, 4]		SPI Mode 0				
EP_$\overline{CS}$ Falling Edge to EP_SCLK Rising Edge	t_{20}		10			ns
Final EP_SCLK Rising Edge to EP_$\overline{CS}$ Rising Edge	t_{22}		10			ns
EP_$\overline{CS}$ Pulse Width[5]	t_{23}			20 × EP_SCLK periods		ns
EP_SCLK High Time	t_{24}		45		55	% duty cycle
EP_SCLK Low Time			45		55	% duty cycle
EP_MOSI Setup Time	t_{25}		0.5			ns
EP_MOSI Hold Time	t_{26}		1.4			ns
EP_SCLK Falling Edge to EP_MISO Start of Data Invalid	t_{27}		5.5			ns
EP_SCLK Falling Edge to EP_MISO End of Data Invalid	t_{28}				9	ns
VIDEO DATA AND CONTROL INPUTS						
PCLK High Time[5]	t_{29}			0.45 to 0.55 × PCLK period		% duty cycle
PCLK Low Time[5]				0.45 to 0.55 × PCLK period		% duty cycle
Pixel Port Input, Setup Time, SDR and DDR Modes	t_{30}	Data latched on rising edge	1.0			ns
Pixel Port Input, Hold Time, SDR and DDR Modes	t_{31}	Data latched on rising edge	1.4			ns
Pixel Port Input, Setup Time, DDR Mode	t_{32}	Data latched on falling edge	1.0			ns
Pixel Port Input, Hold Time, DDR Mode	t_{33}	Data latched on falling edge	1.4			ns
AUDIO INPUT PORT, I²S INPUT						
AP_IN_SCLK High Time	t_{37}		45		55	% duty cycle
AP_IN_SCLK Low Time			45		55	% duty cycle
AP_IN Data Setup Time	t_{38}		2.3			ns
AP_IN Data Hold Time	t_{39}		1.6			ns
AUD_IN_SCLK High Time	t_{37}		45		55	% duty cycle
AUD_IN_SCLK Low Time			45		55	% duty cycle
AUD_IN Data Setup Time	t_{38}		1.0			ns
AUD_IN Data Hold Time	t_{39}		3.5			ns
AUDIO INPUT PORT, DSD INPUT						
AP_IN_SCLK High Time	t_{40}		45		55	% duty cycle
AP_IN_SCLK Low Time			45		55	% duty cycle
AP_IN DSD Data Setup Time	t_{41}		2.3			ns
AP_IN DSD Data Hold Time	t_{42}		1.6			ns
AUDIO OUTPUT PORT, I²S OUTPUT						
AP_OUT_SCLK High Time	t_{46}		45		55	% duty cycle
AP_OUT_SCLK Low Time			45		55	% duty cycle
AP_OUT LRCLK Transition Time	t_{47}	Start of invalid LRCLK to falling AP_OUT_SCLK edge			10	ns
AP_OUT LRCLK Transition Time	t_{48}	Falling AP_OUT_SCLK edge to end of invalid LRCLK			10	ns

Parameter	Symbol	Test Conditions/Comments	Min	Typ	Max	Unit
AP_OUT Data Transition Time	t_{49}	Start of invalid data to falling AP_OUT_SCLK edge			10	ns
AP_OUT Data Transition Time	t_{50}	Falling AP_OUT_SCLK edge to end of invalid data			10	ns
AUDIO OUTPUT PORT, DSD OUTPUT						
AP_OUT_SCLK High Time	t_{51}		45		55	% duty cycle
AP_OUT_SCLK Low Time			45		55	% duty cycle
AP_OUT DSD Data Transition Time	t_{52}	Start of invalid data to falling AP_OUT_SCLK edge			10	ns
AP_OUT DSD Data Transition Time	t_{53}	Falling AP_OUT_SCLK edge to end of invalid data			10	ns

[1] xCL refers to SCL, DDC_SCL_RXA, DDC_SCL_RXB, DDC_SCL_RXC, DDC_SCL_RXD, and DDC_SCL_RXE.
[2] xDA refers to SDA, DDC_SDA_RXA, DDC_SDA_RXB, DDC_SDA_RXC, DDC_SDA_RXD, and DDC_SDA_RXE.
[3] SPI Mode 0 only.
[4] All serial port measurements are for CPHA = 0, CPOL = 0 (clock is low in idle state; negative edge of clock is used to transmit data and positive edge is used to sample data).
[5] Measurements guaranteed by design only.

POWER SPECIFICATIONS

Table 3.

Parameter	Symbol	Min	Typ	Max	Unit
POWER SUPPLIES					
HDMI Tx Analog Power Supply	AVDD_TX	1.71	1.8	1.89	V
Comparator Power Supply	CVDD	1.71	1.8	1.89	V
Digital Power Supply	DVDD	1.71	1.8	1.89	V
Digital I/O Power Supply	DVDDIO	3.14	3.3	3.46	V
PLL Power Supply	PVDD	1.71	1.8	1.89	V
HDMI Tx PLL Power Supply	PVDD_TX	1.71	1.8	1.89	V
Termination Power Supply	TVDD	3.14	3.3	3.46	V
CURRENT CONSUMPTION—MUX MODE[1, 2]					
HDMI Tx Analog Power Supply	I_{AVDD_TX}		24		mA
Comparator Power Supply	I_{CVDD}		96.5		mA
Digital Core Power Supply	I_{DVDD}		173		mA
Digital I/O Power Supply	I_{DVDDIO}		1.5		mA
PLL Power Supply	I_{PVDD}		34		mA
HDMI Tx PLL Power Supply	I_{PVDD_TX}		70		mA
Termination Power Supply	I_{TVDD}		113		mA

Parameter	Symbol	Min	Typ	Max	Unit
CURRENT CONSUMPTION—AUDIO INSERT MODE[1, 3]					
HDMI Tx Analog Power Supply	I_{AVDD_TX}		26		mA
Comparator Power Supply	I_{CVDD}		184		mA
Digital Core Power Supply	I_{DVDD}		216		mA
Digital I/O Power Supply	I_{DVDDIO}		0.05		mA
PLL Power Supply	I_{PVDD}		64.1		mA
HDMI Tx PLL Power Supply	I_{PVDD_TX}		71		mA
Termination Power Supply	I_{TVDD}		116		mA
CURRENT CONSUMPTION—POWER-DOWN MODE 0[1, 4]					
HDMI Tx Analog Power Supply	I_{AVDD_TX}		1.30		mA
Comparator Power Supply	I_{CVDD}		0.84		mA
Digital Core Power Supply	I_{DVDD}		0.25		mA
Digital I/O Power Supply	I_{DVDDIO}		0.21		mA
PLL Power Supply	I_{PVDD}		0.02		mA
HDMI Tx PLL Power Supply	I_{PVDD_TX}		0.10		mA
Termination Power Supply	I_{TVDD}		0.14		mA
CURRENT CONSUMPTION—POWER-DOWN MODE 1[1, 5]					
HDMI Tx Analog Power Supply	I_{AVDD_TX}		1.90		mA
Comparator Power Supply	I_{CVDD}		0.84		mA
Digital Core Power Supply	I_{DVDD}		0.95		mA
Digital I/O Power Supply	I_{DVDDIO}		0.21		mA
PLL Power Supply	I_{PVDD}		0.02		mA
HDMI Tx PLL Power Supply	I_{PVDD_TX}		0.10		mA
Termination Power Supply	I_{TVDD}		0.14		mA
CURRENT CONSUMPTION—EXAMPLE MAXIMUM OPERATING MODE[1, 6]					
HDMI Tx Analog Power Supply	I_{AVDD_TX}			31.00	mA
Comparator Power Supply	I_{CVDD}			213.00	mA
Digital Core Power Supply	I_{DVDD}			255.00	mA
Digital I/O Power Supply	I_{DVDDIO}			0.20	mA
PLL Power Supply	I_{PVDD}			75.00	mA
HDMI Tx PLL Power Supply	I_{PVDD_TX}			82.00	mA
Termination Power Supply	I_{TVDD}			127.00	mA

[1] Data recorded during lab characterization. Typical current consumption values are recorded with nominal voltage supply levels and at room temperature.
[2] ADV7627 configured in mux mode with one active HDMI Rx input and the HDMI Tx output in use. 4k × 2k at 30 Hz video format with pseudo random test pattern applied to the active HDMI Rx input port. HDMI Rx termination closed on the active HDMI Rx input port and open on the unused HDMI Rx input ports. HDMI Tx source termination enabled.
[3] ADV7627 configured in audio insert mode with one active HDMI Rx input and the HDMI Tx output in use. Audio inserted on HDMI Tx output from the AP_IN input port. HBR audio used. No audio extraction. 4k × 2k at 30 Hz video format with pseudo random test pattern applied to the active HDMI Rx input port. HDMI Rx port termination closed on the active HDMI Rx input port and open on the unused HDMI Rx input ports. HDMI Tx source termination enabled. OSD not enabled.
[4] ADV7627 configured in Power-Down Mode 0. In Power-Down Mode 0, all blocks are powered down except for the I²C slave.
[5] ADV7627 configured in Power-Down Mode 1. In Power-Down Mode 1, all blocks are powered down except for the I²C slave and the CEC (to monitor wake-up interrupts).
[6] ADV7627 configured in an example maximum operating mode with one active HDMI Rx input and the HDMI Tx output in use. HBR audio from the active HDMI Rx input inserted on the HDMI Tx output. No audio extraction. 4k × 2k at 30 Hz video format with pseudo random test pattern applied to the active HDMI Rx input port. HDMI Rx port termination closed on the active HDMI Rx input port and open on the unused HDMI Rx input ports. HDMI Tx source termination enabled. OSD not enabled. Maximum current consumption values recorded with maximum power supply levels at device maximum operating temperature.

ABSOLUTE MAXIMUM RATINGS

Table 4.

Parameter	Rating
AVDD_TX to GND	2.2 V
CVDD to GND	2.2 V
DVDD to GND	2.2 V
PVDD to GND	2.2 V
PVDD_TX to GND	2.2 V
DVDDIO to GND	4.0 V
TVDD to GND	4.0 V
Digital Inputs Voltage to GND	GND − 0.3 V to DVDDIO + 0.3 V up to a maximum of 4.0 V
5 V Tolerant Digital Inputs to GND[1]	5.5 V
Digital Outputs Voltage to GND	GND − 0.3 V to DVDDIO + 0.3 V up to a maximum of 4.0 V
XTAL+, XTAL− Pins	−0.3 V to PVDD + 0.3 V
Maximum Junction Temperature ($T_{J\,MAX}$)	125°C
Storage Temperature Range	−65°C to +150°C
Infrared Reflow, Soldering (20 sec)	260°C

[1] The following inputs are 5 V tolerant: DDC_SCL_RXA, DDC_SDA_RXA, DDC_SCL_RXB, DDC_SDA_RXB, DDC_SCL_RXC, DDC_SDA_RXC, DDC_SCL_RXD, DDC_SDA_RXD, DDC_SCL_RXE, DDC_SDA_RXE, RXA_5V, RXB_5V, RXC_5V, RXD_5V, RXE_5V, CEC, DDC_SCL_TX, DDC_SDA_TX, TX_HPD_ARC−, and TX_ARC+.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

PACKAGE THERMAL PERFORMANCE

To reduce power consumption when using the ADV7627, the user is advised to turn off unused sections of the device.

Due to printed circuit board (PCB) metal variation and, therefore, variation in PCB heat conductivity, the value of θ_{JA} may differ for various PCBs. The most efficient measurement solution is obtained using the package surface temperature to estimate the die temperature because this solution eliminates the variance associated with the θ_{JA} value.

The maximum junction temperature ($T_{J\,MAX}$) of 125°C must not be exceeded. The following equation calculates the junction temperature using the measured package surface temperature and applies only when no heat sink is used on the device under test (DUT):

$$T_J = T_S + (\Psi_{JT} \times W_{TOTAL})$$

where:
T_S is the package surface temperature (°C).
Ψ_{JT} = 0.41°C/W for the 260-ball CSP_BGA (based on 2s2p test board defined in the JEDEC specification).

$$W_{TOTAL} = ((PVDD \times I_{PVDD}) + (PVDD\_TX \times I_{PVDD\_TX}) + (TVDD \times I_{TVDD}) + (CVDD \times I_{CVDD}) + (AVDD\_TX \times I_{AVDD\_TX}) + (DVDD \times I_{DVDD}) + (DVDDIO \times I_{DVDDIO}))$$

Note that this calculation assumes a configuration of one active HDMI Rx input and one active HDMI Tx output, where termination is open on the unused Rx input ports.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Figure 19. Pin Configuration

Table 5. Pin Function Descriptions

Pin No.	Mnemonic	Function	Description
A1	GND	Ground	Ground.
A2	RXA_2+	HDMI Rx input	HDMI RxA Channel 2 True Input.
A3	RXA_1+	HDMI Rx input	HDMI RxA Channel 1 True Input.
A4	RXA_0+	HDMI Rx input	HDMI RxA Channel 0 True Input.
A5	RXA_C+	HDMI Rx input	HDMI RxA Clock True Input.
A6	CVDD	Power	Comparator Power Supply (1.8 V).
A7	RXB_2+	HDMI Rx input	HDMI RxB Channel 2 True Input.
A8	RXB_1+	HDMI Rx input	HDMI RxB Channel 1 True Input.
A9	RXB_0+	HDMI Rx input	HDMI RxB Channel 0 True Input.
A10	RXB_C+	HDMI Rx input	HDMI RxB Clock True Input.
A11	CVDD	Power	Comparator Power Supply (1.8 V).
A12	RXC_2+	HDMI Rx input	HDMI RxC Channel 2 True Input.

Pin No.	Mnemonic	Function	Description
A13	RXC_1+	HDMI Rx input	HDMI RxC Channel 1 True Input.
A14	RXC_0+	HDMI Rx input	HDMI RxC Channel 0 True Input.
A15	RXC_C+	HDMI Rx input	HDMI RxC Clock True Input.
A16	CVDD	Power	Comparator Power Supply (1.8 V).
A17	RXC_5V	HDMI Rx input	HDMI RxC 5 V Detect Pin.
A18	GND	Ground	Ground.
B1	GND	Ground	Ground.
B2	RXA_2−	HDMI Rx input	HDMI RxA Channel 2 Complement Input.
B3	RXA_1−	HDMI Rx input	HDMI RxA Channel 1 Complement Input.
B4	RXA_0−	HDMI Rx input	HDMI RxA Channel 0 Complement Input.
B5	RXA_C−	HDMI Rx input	HDMI RxA Clock Complement Input.
B6	CVDD	Power	Comparator Power Supply (1.8 V).
B7	RXB_2−	HDMI Rx input	HDMI RxB Channel 2 Complement Input.
B8	RXB_1−	HDMI Rx input	HDMI RxB Channel 1 Complement Input.
B9	RXB_0−	HDMI Rx input	HDMI RxB Channel 0 Complement Input.
B10	RXB_C−	HDMI Rx input	HDMI RxB Clock Complement Input.
B11	CVDD	Power	Comparator Power Supply (1.8 V).
B12	RXC_2−	HDMI Rx input	HDMI RxC Channel 2 Complement Input.
B13	RXC_1−	HDMI Rx input	HDMI RxC Channel 1 Complement Input.
B14	RXC_0−	HDMI Rx input	HDMI RxC Channel 0 Complement Input.
B15	RXC_C−	HDMI Rx input	HDMI RxC Clock Complement Input.
B16	CVDD	Power	Comparator Power Supply (1.8 V).
B17	RXC_HPA	HDMI Rx output	HDMI RxC Hot Plug Assert.
B18	GND	Ground	Ground.
C1	GND	Ground	Ground.
C2	CVDD	Power	Comparator Power Supply (1.8 V).
C3	CVDD	Power	Comparator Power Supply (1.8 V).
C4	TVDD	Power	HDMI Rx Terminator Supply Voltage (3.3 V).
C5	TVDD	Power	HDMI Rx Terminator Supply Voltage (3.3 V).

V16	P4	Pixel port input	Pixel Port Input P4.
V17	P6	Pixel port input	Pixel Port Input P6.
V18	GND	Ground	Ground.

POWER SUPPLY RECOMMENDATIONS

POWER-UP SEQUENCE

The power-up sequence for the ADV7627 is as follows:

1. Hold the $\overline{\text{RESET}}$ pin low.
2. Power up the 3.3 V supplies (DVDDIO and TVDD).
3. After the 3.3 V supplies reach their minimum recommended value of 3.14 V, wait at least 20 ms before powering up the 1.8 V supplies.
4. Power up the 1.8 V supplies (AVDD_TX, CVDD, DVDD, PVDD, and PVDD_TX). These supplies should be powered up at the same time; that is, there should be a difference of less than 0.3 V between them.
5. Release the $\overline{\text{RESET}}$ pin after all supplies are established.

After power-up, a complete reset is recommended. This reset can be performed by the system microcontroller.

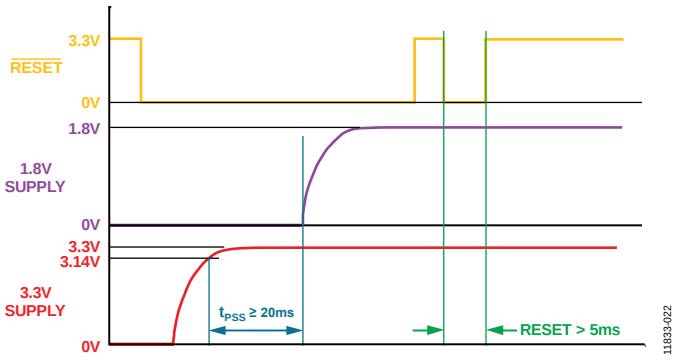

Figure 20. ADV7627 Supply Power-Up Sequence

POWER-DOWN SEQUENCE

The ADV7627 supplies can be deasserted simultaneously as long as DVDDIO or TVDD does not fall below a lower rated supply.

THEORY OF OPERATION

HDMI RECEIVER

The ADV7627 front end incorporates a 5:1 multiplexed HDMI receiver capable of receiving all HDTV formats up to 3 GHz (4k × 2k at 24 Hz/25 Hz/30 Hz). The HDMI receiver also supports HDMI features including 3D TV and content type bits.

The HDMI receiver in the ADV7627 incorporates an adaptive equalizer, which compensates for the high frequency losses inherent in HDMI and DVI cabling, especially at longer lengths and higher frequencies.

The ADV7627 features a 768-byte internal EDID memory space, which can be used to store two independent EDIDs. The memory can be partitioned to provide two 256-byte EDIDs or one 512-byte extended EDID and one 256-byte EDID. Either EDID can be replicated on any input port.

The HDMI receiver offers advanced audio functionality. The receiver supports multichannel I²S audio for up to eight channels. The receiver also supports a six-DSD channel interface, with each channel carrying an oversampled 1-bit representation of the audio signal as delivered on SACD. The ADV7627 can also receive HBR audio packet streams and output them through the HBR interface in an S/PDIF format that conforms to the IEC 60958 standard. S/PDIF is supported via the HPD back channel. The receiver also contains an audio mute controller that can detect a variety of conditions that can result in audible extraneous noise in the audio output. On detection of these conditions, the audio data can be ramped to prevent audio clicks or pops.

HDCP REPEATER FUNCTIONALITY

With the inclusion of HDCP 1.4, displays can receive encrypted video content. The HDMI interface of the ADV7627 allows authentication of a video receiver, decryption of encoded data at the receiver, and renewability of that authentication during transmission, as specified by the HDCP 1.4 protocol. Repeater support is also offered by the ADV7627.

DIGITAL AUDIO PORTS

The ADV7627 features an audio input port and an audio output port. The audio input and output ports provide comprehensive muxing support for the destination of the audio (for example, to the HDMI transmitter or audio output port) and support for the source of the audio (for example, from the HDMI receiver or from the audio input port). The extracted audio can be processed by a SHARC® processor and can be reinserted back into the HDMI output stream or output via the hardware connected to the system.

The pins for the pixel port input signals (P15 to P8) are shared with the AP_IN audio input port. When the pixel port input is in use, the AUD_IN port can be used to provide stereo audio input.

ON-SCREEN DISPLAY

A key feature of the ADV7627 is the on-chip character- and icon-based OSD generator. The generated OSD can be converted to match the 4:2:2 or 4:4:4 input format in either the RGB or YCrCb color spaces. After the OSD is generated, it is overlaid at the output resolution (any video resolution up to 4k × 2k at 24 Hz/25 Hz/30 Hz) for best performance. The OSD portion of the image is optionally semitransparent using a 5-bit alpha blend between the input video and the OSD. The OSD font characters and icons can be stored in external SPI flash memory, read directly into RAM, or they can be loaded into the on-chip RAM via the SPI or I²C interface.

PIXEL PORT INPUT

The ADV7627 features a 16-bit pixel input port that facilitates the reception of digital video data from an analog front-end video decoder such as the ADV7180, ADV7181D, or ADV7842. Both embedded timing and external synchronization signals are supported on the pixel port. The pixel port input also features an interlaced-to-progressive converter for 480i or 576i inputs.

HDMI TRANSMITTER

The ADV7627 incorporates an HDMI transmitter, which supports all HDTV formats up to 3 GHz (4k × 2k at 24 Hz/25 Hz/30 Hz), ARC, and all mandatory 3D TV formats. The HDMI transmitter can output any audio mode received from the HDMI receiver, including audio sample packets, HBR, or DSD.

The ARC receiver supports both single-ended and differential modes and simplifies cabling by combining an upstream audio capability in a conventional HDMI cable. The transmitter features an on-chip MPU with an I²C master to perform HDCP operations and EDID read operations.

I²C INTERFACE

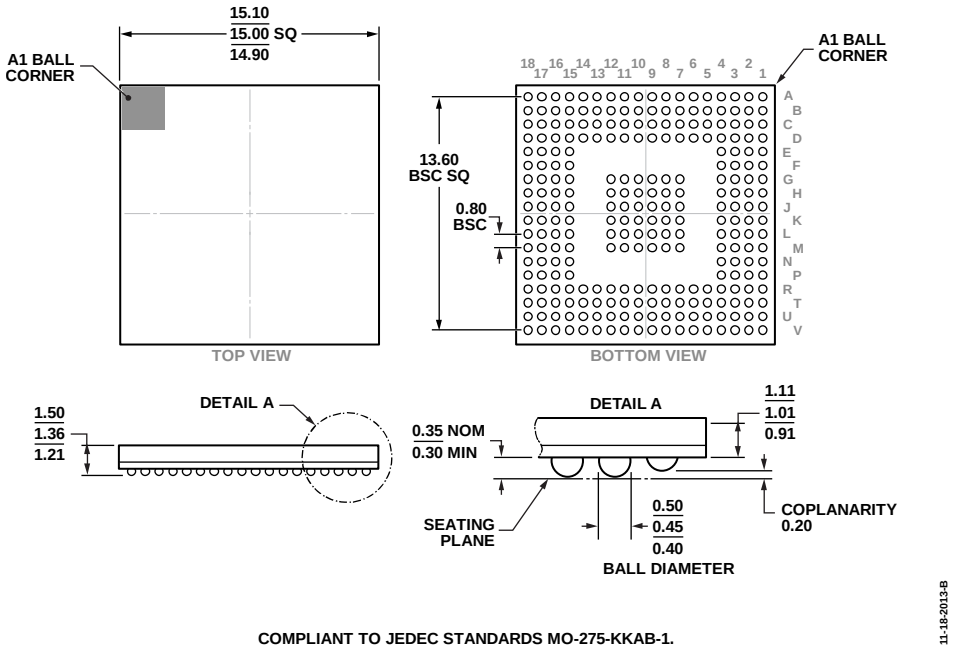
The ADV7627 supports a 2-wire serial (I²C-compatible) microprocessor bus driving multiple peripherals. The ADV7627 is controlled by an external I²C master device, such as a microcontroller.

OTHER FEATURES

Other features of the ADV7627 include the following:

- Fully qualified software low level libraries, driver, and application
- Complete input and output audio support
- Programmable interrupt request output pins: INT1 and INT2
- Chip select and ALSB
- Low power consumption: 1.8 V digital core, 1.8 V analog, and 3.3 V digital input/output
- Temperature range: 0°C to 70°C
- 15 mm × 15 mm, Pb-free, 260-ball CSP_BGA

OUTLINE DIMENSIONS



COMPLIANT TO JEDEC STANDARDS MO-275-KKAB-1.
