

AN-EVAL-3AR4780VJZ

12W 5V SMPS evaluation board with ICE3AR4780VJZ

Application Note

About this document

Scope and purpose

This document is a 12W 5.0V, universal input off-line flyback converter evaluation board using Infineon CoolSET™ F3R80 family, ICE3AR4780VJZ.

Intended audience

This document is intended for users of the ICE3AR4780VJZ who wish to design low cost and high reliable system of off-line SMPS for enclosed adapter or open frame auxiliary power supply of white goods, PC, server, DVD, TV, Set-top box, etc.

Abstract

1 Abstract

This document is an engineering report of a universal input 12W 5V off-line flyback converter power supply utilizing F3R80 CoolSET™ ICE3AR4780VJZ. The application evaluation board is operated in Discontinuous Conduction Mode (DCM) and is running at 100 kHz switching frequency. It has a single output voltage with secondary side control regulation. It is especially suitable for small power supply such as DVD player, set-top box, game console, charger and auxiliary power of white goods, server, PC and high power system, etc. The ICE3AR4780VJZ is the latest version of the CoolSET™. Besides having the basic features of the F3R CoolSET™ such as Active Burst Mode, propagation delay compensation, soft gate drive, auto restart protection for major fault (Vcc over voltage, Vcc under voltage, adjustable input OVP, over temperature, over-load, open loop and short opto-coupler), it also has the BiCMOS technology design, selectable entry and exit burst mode level, adjustable AC line input over voltage protection feature, built-in soft start time, built-in and extendable blanking time and frequency jitter feature, etc. The particular features are the best-in-class low standby power and the good EMI performance.

2 Evaluation board

This document contains the list of features, the power supply specification, schematic, bill of material and the transformer construction documentation. Typical operating characteristics such as performance curve and scope waveforms are showed at the rear of the report.

Evaluation board specifications

3 Evaluation board specifications

Input voltage	85VAC~265VAC
Input frequency	50~60Hz
Output voltage	5V
Output current	2.4A
Output power	12W
Steady state output ripple voltage (±1% of nominal output voltage)	$V_{\text{ripple_P_P}} < 50\text{mV}$
Dynamic load response undershoot & overshoot (±3% of nominal output voltage)	$V_{\text{ripple_P_P}} < 250\text{mV}$
Active mode four point average efficiency (25%,50%,75% & 100%load) (EU CoC Version 5, Tier 1)	>80% at 115Vac and >79% at 230Vac
Active mode at 10% load efficiency (EU CoC Version 5, Tier 1)	>73%
No-load power consumption (EU CoC Version 5, Tier 2)	< 75mW
Maximum input power(Peak Power) for universal input range (<±5% of average maximum input power)	<±3% of average maximum input power
Form factor case size (L x W x H)	95mm x 41mm x 24mm (3.74" x 1.61" x 0.94")

4 List of features (ICE3AR4780VJZ)

800V avalanche rugged CoolSET™ with Startup Cell
Active Burst Mode for lowest Standby Power
Selectable entry and exit burst mode level
100kHz internally fixed switching frequency with jittering feature
Auto Restart Protection for Over load, Open Loop, VCC Under voltage & Over voltage and Over temperature
Over temperature protection with 50°C hysteresis
Built-in 10ms Soft Start
Built-in 20ms and extendable blanking time for short duration peak power
Propagation delay compensation for both maximum load and burst mode
Adjustable input OVP
Overall tolerance of Current Limiting < ±5%
BiCMOS technology for low power consumption and wide VCC voltage range
Soft gate drive with 50Ω turn on resistor

Circuit description

5 Circuit description

5.1 Introduction

The EVAL-3AR4780VJZ evaluation board is a low cost off-line flyback switch mode power supply (SMPS) using the ICE3AR4780VJZ integrated power IC from the CoolSET™-F3R80 family. The circuit shown in Figure 3, details a 5V, 12W power supply that operates from an AC line input voltage range of 85Vac to 265Vac and line input OVP detect/reset voltage is 300/282Vac, suitable for applications in enclosed adapter or open frame auxiliary power supply for different system such as white goods, PC, server, DVD, LED TV, Set-top box, etc.

5.2 Line input

The AC line input side comprises the input fuse F1 as over-current protection. The choke L11, X-capacitors C11, C14 and Y-capacitor C12 act as EMI suppressors. Optional spark gap device SG1, SG2 and varistor VAR can absorb high voltage stress during lightning surge test. After the bridge rectifier BR1 and the input bulk capacitor C13, a voltage of 90 to 424 V_{DC} is present which depends on input line voltage.

5.3 Line input over voltage protection

The AC line input OVP mode is detected by sensing the voltage level at BV pin through the resistors divider from the bulk capacitor. Once the voltage level at BV pin hits above 1.98V, the controller stops switching and enters into input OVP mode. When the BV voltage drops to 1.91V and the V_{CC} hits 17V, the input OVP mode is released.

5.4 Start up

Since there is a built-in startup cell in the ICE3AR4780VJZ, no external start up resistor is required. The startup cell is connecting the drain pin of the IC. Once the voltage is built up at the Drain pin of the ICE3AR4780VJZ, the startup cell will charge up the V_{CC} capacitor C16 and C17. When the V_{CC} voltage exceeds the UVLO at 17V, the IC starts up. Then the V_{CC} voltage is bootstrapped by the auxiliary winding to sustain the operation.

5.5 Operation mode

During operation, the V_{CC} pin is supplied via a separate transformer winding with associated rectification D12 and buffering C16, C17. In order not to exceed the maximum voltage at V_{CC} pin due to poor coupling of transformer winding, an external zener diode ZD11 and resistor R13 can be added.

5.6 Soft start

The Soft-Start is a built-in function and is set at 10ms.

5.7 RCD clamper circuit

While turns off the CoolMOS™, the clamper circuit R11, C15 and D11 absorbs the current caused by transformer leakage inductance once the voltage exceeds clamp capacitor voltage. Finally drain to source voltage of CoolMOS™ is lower than maximum break down voltage ($V_{(BR)DSS} = 800V$) of CoolMOS™.

Circuit description

5.8 Peak current control of primary current

The CoolMOS™ drain source current is sensed via external shunt resistors R14 and R14A which determine the tolerance of the current limit control. Since ICE3AR4780VJZ is a current mode controller, it would have a cycle-by-cycle primary current and feedback voltage control which can make sure the maximum power of the converter is controlled in every switching cycle. Besides, the patented propagation delay compensation is implemented to ensure the maximum input power can be controlled in an even tighter manner. The evaluation board shows approximately $\pm 2.2\%$ of average maximum input power (refer to Figure 11).

5.9 Output stage

On the secondary side the power is coupled out by a schottky diode D21. The capacitor C22 & C23 provides energy buffering following with the LC filter L21 and C24 to reduce the output voltage ripple considerably. Storage capacitors C22 & C23 are selected to have a very small internal resistance (ESR) to minimize the output voltage ripple.

Circuit diagram

6 Circuit diagram

Figure 2 Schematic of EVAL-3AR4780VJZ

PCB layout

N.B. : In order to get the optimized performance of the CoolSET™, the grounding of the PCB layout must be connected very carefully. From the circuit diagram above, it indicates that the grounding for the CoolSET™ can be split into several groups; signal ground, Vcc ground, Current sense resistor ground and EMI return ground. All the split grounds should be connected to the bulk capacitor ground separately.

Signal ground includes all small signal grounds connecting to the CoolSET™ GND pin such as filter capacitor ground, C17, C18, C19 and opto-coupler ground.

Vcc ground includes the Vcc capacitor ground, C16 and the auxiliary winding ground, pin 2 of the power transformer.

Current Sense resistor ground includes current sense resistor R14 and R14A.

EMI return ground includes Y capacitor, C12.

<p>Figure 29 Entering active burst mode @ 85Vac</p>	<p>Figure 30 Leaving active burst mode @ 85Vac</p>

Waveforms and scope plots

11.9 V_{CC} over voltage protection (Odd skip auto restart mode)

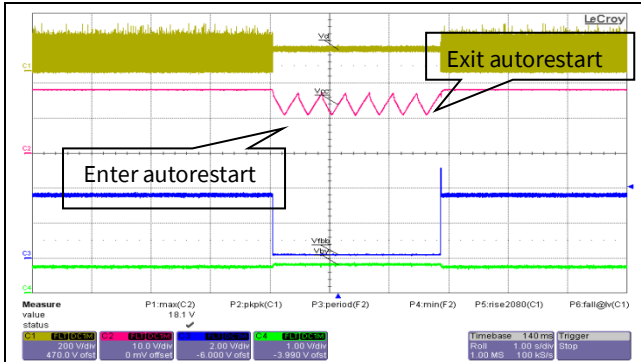

11.10 Over load protection (Auto restart mode)

Waveforms and scope plots

11.11 V_{CC} under voltage/Short optocoupler protection (Normal auto restart mode)

Channel 1; C1 : Current sense voltage (V_{CS})
 Channel 2; C2 : Supply voltage (V_{CC})
 Channel 3; C3 : Feedback voltage (V_{FBB})
 Channel 4; C4 : BV voltage (V_{BV})

Condition: $V_{CC} < 10.5V$
 (short the transistor of optocoupler during system operating @ full load and release)

Figure 33 V_{CC} under voltage/short optocoupler protection @ 85Vac

11.12 AC Line input OVP mode

Channel 1; C1 : Bulk voltage (V_{bulk})
 Channel 2; C2 : Supply voltage (V_{CC})
 Channel 3; C3 : Current sense voltage (V_{CS})
 Channel 4; C4 : BV voltage (V_{BV})

Condition: $V_{BV} > 1.98V$ & last for $400\mu s$ (OVP detect)
 $V_{BV} < 1.91V$ & last for $5\mu s$ (OVP reset)
 (gradually increase AC line voltage until OVP detect and decrease AC line until OVP reset)

Figure 34 Input OVP mode at max. load condition

Channel 1; C1 : Bulk voltage (V_{bulk})
 Channel 2; C2 : Supply voltage (V_{CC})
 Channel 3; C3 : Current sense voltage (V_{CS})
 Channel 4; C4 : BV voltage (V_{BV})

Condition: $V_{BV} > 1.98V$ & last for $400\mu s$ (OVP detect)
 $V_{BV} < 1.91V$ & last for $5\mu s$ (OVP reset)
 (gradually increase AC line voltage until OVP detect and decrease AC line until OVP reset)

Figure 35 Input OVP mode at no load condition

Legal Disclaimer

THE INFORMATION GIVEN IN THIS APPLICATION NOTE (INCLUDING BUT NOT LIMITED TO CONTENTS OF REFERENCED WEBSITES) IS GIVEN AS A HINT FOR THE IMPLEMENTATION OF THE INFINEON TECHNOLOGIES COMPONENT ONLY AND SHALL NOT BE REGARDED AS ANY DESCRIPTION OR WARRANTY OF A CERTAIN FUNCTIONALITY, CONDITION OR QUALITY OF THE INFINEON TECHNOLOGIES COMPONENT. THE RECIPIENT OF THIS APPLICATION NOTE MUST VERIFY ANY FUNCTION DESCRIBED HEREIN IN THE REAL APPLICATION. INFINEON TECHNOLOGIES HEREBY DISCLAIMS ANY AND ALL WARRANTIES AND LIABILITIES OF ANY KIND (INCLUDING WITHOUT LIMITATION WARRANTIES OF NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS OF ANY THIRD PARTY) WITH RESPECT TO ANY AND ALL INFORMATION GIVEN IN THIS APPLICATION NOTE.

Information

For further information on technology, delivery terms and conditions and prices, please contact the nearest Infineon Technologies Office (www.infineon.com).

Warnings

Due to technical requirements, components may contain dangerous substances. For information on the types in question, please contact the nearest Infineon Technologies Office. Infineon Technologies components may be used in life-support devices or systems only with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.
