OPA355-Q1 200-MHz CMOS Operational Amplifier With Shutdown

Technical

Documents

1 Features

- Qualified for Automotive Applications
- AEC-Q100 Qualified With the Following Results
 - Device Temperature Grade 1: –40°C to 125°C Ambient Operating Temperature
 - Device HBM ESD Classification Level 2
 - Device CDM ESD Classification Level C4B
- Unity-Gain Bandwidth: 450 MHz
- Wide Bandwidth: 200 MHz GBW
- High Slew Rate: 360 V/µs
- Low Noise: 5.8 nV/√Hz
- Excellent Video Performance:
 - Differential Gain: 0.02%
 - Differential Phase: 0.05° 0.1 dB
 - Gain Flatness: 75 MHz
- Input Range Includes Ground
- Rail-to-Rail Output (within 100 mV)
- Low Input Bias Current: 3 pA
- Low Shutdown Current: 3.4 μA
- Enable and Disable Time: 100 ns and 30 ns
- Thermal Shutdown
- Single-Supply Operating Range: 2.5 to 5.5 V
- MicroSIZE Packages

2 Applications

- Automotive
- Active Filters
- High-Speed Integrators
- Analog-to-Digital Converter (ADC) Input Buffers
- Digital-to-Analog Converter (DAC) Output
 Amplifiers

3 Description

Tools &

Software

The OPA355-Q1 device is a high-speed, voltagefeedback CMOS operational amplifier designed for applications requiring wide bandwidth. The OPA355-Q1 device is unity-gain stable and can drive large output currents. In addition, the OPA355-Q1 device has a digital shutdown (enable) function. This feature provides power saving during idle periods and places the output in a high-impedance state to support output multiplexing. The differential gain is 0.02% and the differential phase is 0.05°. The quiescent current is 8.3 mA per channel.

Support &

Community

29

The OPA355-Q1 device is optimized for operation on single supply or dual supplies as low as 2.5 V (\pm 1.25 V) and up to 5.5 V (\pm 2.75 V). The common-mode input range for the OPA355-Q1 device extends 100 mV below ground and up to 1.5 V from V+. The output swing is within 100 mV of the rails, supporting wide dynamic range.

The OPA355-Q1 device is available in a single SOT23-6 package and is specified over the extended –40°C to 125°C range.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
OPA355-Q1	SOT-23 (6)	2.90 mm × 1.60 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
Supply voltage	V+ to V-		7.5	V
Signal input terminals	Voltage	(V–) – 0.5	(V+) + 0.5	V
	Current		10	mA
Output short circuit ⁽²⁾		Continuous		
Operating temperature		-55	150	°C
Junction Temperature			160	°C
Lead temperature (soldering, 10	seconds)		300	°C

(1) Stresses above absolute maximum ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.

(2) Short-circuit to ground, one amplifier per package.

7.2 Handling Ratings

				MIN	MAX	UNIT
T _{stg}	Storage temperature range			-65	150	°C
V _(ESD) Electrostatic disch		Human body model (HBM), per AEC		2000		
	Electrostatic discharge	Charged device model (CDM), per	Corner pins (1, 3, 4, and 6)		750	V
		AEC Q100-011	Other pins		500	

(1) AEC Q100-002 indicates HBM stressing is done in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

7.3 Thermal Information

	THERMAL METRIC ⁽¹⁾	DBV 6 PINS	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	187.3	
R _{0JC(top)}	Junction-to-case (top) thermal resistance	126.5	
$R_{\theta JB}$	Junction-to-board thermal resistance	32.6	°C/M
Ψ _{JT}	Junction-to-top characterization parameter	24.1	0/11
Ψ_{JB}	Junction-to-board characterization parameter	32.1	
R _{0JC(bot)}	Junction-to-case (bottom) thermal resistance	N/A	

(1) For more information about traditional and new thermal metrics, see the IC Package Thermal Metrics application report, SPRA953.

7.4 Electrical Characteristics

 V_{S} = 2.7 V to 5.5 V single supply. At T_{A} = 25°C, R_{F} = 604 Ω , R_{L} = 150 Ω , and connected to V_{S} / 2, unless otherwise noted.

PARAMETER		TEST CONDITIONS	T _A = 25°C			T _A = -40°C to 125°C

Typical Characteristics (continued)

8 Detailed Description

8.1 Feature Description

8.1.1 Operating Voltage

The OPA355-Q1 device is specified over a power-supply range of 2.7 to 5.5 V (\pm 1.35 to \pm 2.75 V). However, the supply voltage can range from 2.5 to 5.5 V (\pm 1.25 to \pm 2.75 V). Supply voltages higher than 7.5 V (absolute maximum) can permanently damage the amplifier.

Parameters that vary significantly over supply voltage or temperature are shown in the Typical Characteristics section of this data sheet.

8.1.2 Enable Function

The OPA355-Q1 device is enabled by applying a TTL HIGH-voltage level to the Enable pin. Conversely, a TTL LOW-voltage level disables the amplifier which reduces the supply current from 8.3 mA to only 3.4 μ A per amplifier. This pin voltage is referenced to a single-supply ground. When using a split-supply, such as ±2.5 V, the enable and disable voltage levels are referenced to V–. Independent Enable pins are available for each channel, providing maximum design flexibility. For portable battery-operated applications, this feature can be used to greatly reduce the average current and thereby extend battery life.

The Enable input can be modeled as a CMOS input gate with a 100-k Ω pullup resistor to V+. Left open, the Enable pin assumes a logic HIGH, and the amplifier turns on.

The Enable time is 100 ns and the disable time is 30 ns which allows the OPA355-Q1 device to operate as a *gated* amplifier, or to have the output multiplexed onto a common output bus. When disabled, the output assumes a high-impedance state.

8.1.3 Output Drive

The output stage supplies a high short-circuit current (typically over 200 mA). Therefore, an on-chip thermal shutdown circuit is provided to protect the OPA355-Q1 device from dangerously-high junction temperatures. At 160°C, the protection circuit shuts down the amplifier. Normal operation resumes when the junction temperature cools to below 140°C.

NOTE Running a continuous DC current in excess of ±60 mA is not recommended. Refer to the *Output Voltage Swing vs Output Current* graphs (Figure 21 and Figure 22) in the Typical Characteristics section.

8.1.4 Input and ESD Protection

All OPA355-Q1 pins are static protected with internal ESD protection diodes tied to the supplies (see Figure 31).

If the current is externally limited to 10 mA by the source or by a resistor, these diodes provide overdrive protection.

9 Application and Implementation

9.1 Application Information

The OPA355-Q1 device is a CMOS, high-speed, voltage-feedback, operational amplifier (op-amp) designed for general-purpose applications.

The amplifier features a 200-MHz gain bandwidth and 360-V/µs slew rate, but the device is unity-gain stable and can operate as a 1-V/V voltage follower.

The input common-mode voltage range of the device includes ground which allows the OPA355-Q1 to be used in virtually any single-supply application up to a supply voltage of +5.5 V.

10 Layout

10.1 Layout Guidelines

Good high-frequency printed-circuit board (PCB) layout techniques must be used for the OPA355-Q1. Generous use of ground planes, short direct-signal traces, and a suitable bypass capacitor located at the V+ pin will assure clean and stable operation. Large areas of copper also help dissipate heat generated within the amplifier in normal operation.

Sockets are not recommended for use with any high-speed amplifier.

A 10-nF ceramic bypass capacitor is the minimum recommended value; adding a 1-µF or larger tantalum capacitor in parallel can be beneficial when driving a low-resistance load. Providing adequate bypass capacitance is essential to achieving very low harmonic and intermodulation distortion.

11 Device and Documentation Support

11.1 Trademarks

All trademarks are the property of their respective owners.

11.2 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

11.3 Glossary

SLYZ022 — TI Glossary.

This glossary lists and explains terms, acronyms, and definitions.

12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

12-Jun-2014

PACKAGING INFORMATION

Orderable Device	Status	Package Type	Package	Pins	Package	Eco Plan	Lead/Ball Finish	MSL Peak Temp	Op Temp (°C)	Device Marking	Samples
	(1)		Drawing		Qty	(2)	(6)	(3)		(4/5)	
OPA355QDBVRQ1	ACTIVE	SOT-23	DBV	6	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 125	SLN	Samples

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes. **Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PACKAGE OPTION ADDENDUM

OTHER QUALIFIED VERSIONS OF OPA355-Q1 :

Catalog: OPA355

NOTE: Qualified Version Definitions:

Catalog - TI's standard catalog product

DBV (R-PDSO-G6)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
 - A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
 - D. Leads 1,2,3 may be wider than leads 4,5,6 for package orientation.
 - È Falls within JEDEC MO-178 Variation AB, except minimum lead width.

LAND PATTERN DATA

NOTES:

- A. All linear dimensions are in millimeters.B. This drawing is subject to change without notice.
- C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
- D. Publication IPC-7351 is recommended for alternate designs.
- E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
