

## DUAL BIDIRECTIONAL I<sup>2</sup>C BUS AND SMBus REPEATER

Check for Samples: [PCA9515B](#)

### FEATURES

- Two-Channel Bidirectional Buffers
  - I<sup>2</sup>C Bus and SMBus Compatible
  - Active-High Repeater-Enable Input
  - Open-Drain I<sup>2</sup>C I/O
  - 5.5-V Tolerant I<sup>2</sup>C I/O and Enable Input Support Mixed-Mode Signal Operation
  - Lockup-Free Operation
  - Accommodates Standard Mode, Fast Mode I<sup>2</sup>C Devices, and Multiple Masters
  - Supports Arbitration and Clock Stretching Across Repeater
  - Powered-Off High-Impedance I<sup>2</sup>C Pins
  - Latch-Up Performance Exceeds 100 mA Per JESD 78, Class I
  - ESD Protection Exceeds JESD 22
- 2000-V Human-Body Model (A114-A)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged-Device Model (C101)

**DGK PACKAGE  
(TOP VIEW)**

NC – No internal connection

### DESCRIPTION

The PCA9515B is a BiCMOS integrated circuit intended for I<sup>2</sup>C bus and SMBus systems applications. The device contains two identical bidirectional open-drain buffer circuits that enables I<sup>2</sup>C and similar bus systems to be extended without degrading system performance. The dual bidirectional I<sup>2</sup>C buffer is operational at 2.3-V to 3.6-V V<sub>CC</sub>.

The PCA9515B buffers both the serial data (SDA) and serial clock (SCL) signals on the I<sup>2</sup>C bus, while retaining all the operating modes and features of the I<sup>2</sup>C system. This feature allows two buses, of 400-pF bus capacitance, to be connected in an I<sup>2</sup>C application.

The I<sup>2</sup>C bus capacitance limit of 400 pF restricts the number of interfaced devices and bus length. Using the PCA9515B, a system designer can isolate two halves of a bus, thus accommodating more I<sup>2</sup>C devices or longer trace lengths.

The PCA9515B has an active-high enable (EN) input with an internal pull-up. This allows users to select when the repeater is active and isolate malfunctioning slaves on power-up reset. States should never be changed during an I<sup>2</sup>C operation. Disabling during a bus operation will hang the bus and enabling part way through a bus cycle may confuse the I<sup>2</sup>C parts being enabled. The EN input should only change state when the global bus and the repeater port are in an idle state to prevent system failures.

The PCA9515B can also be used to operate two buses, one at 5-V interface levels and the other at 3.3-V interface levels. The buses may also function at 400-kHz or 100-kHz operating frequency. If the two buses are operating at different frequencies, the 100-kHz bus must be isolated if the operation of the 400-kHz bus is required. If the master is running at 400-kHz, the maximum system operating frequency may be less than 400 kHz due to the delays added by the repeater.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### ORDERING INFORMATION

T <sub>A</sub>	PACKAGE <sup>(1)</sup> <sup>(2)</sup>		ORDERABLE PART NUMBER	TOP-SIDE MARKING <sup>(3)</sup>
–40°C to 85°C	MSOP – DGK	Reel of 2500	PCA9515BDGKR	7SA

(1) Package drawings, thermal data, and symbolization are available at [www.ti.com/packaging](http://www.ti.com/packaging).

(2) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at [www.ti.com](http://www.ti.com).

(3) DGK: The actual top-side marking has one additional character that designates the assembly/test site.

The low level outputs for each internal buffer are approximately 0.5 V; however, the input voltage of each internal buffer must be 70 mV or more below the low level output when the output is driven low internally. This prevents a lockup condition from occurring when the input low condition is released.

Two or more PCA9515B devices cannot be used in series. Since there is no direction pin, different valid low-voltage levels are used to avoid lockup conditions between the input and the output of each repeater. A valid low, applied at the input of a PCA9515B, is propagated as a buffered low with a higher value on the enabled outputs. When this buffered low is applied to another PCA9515B-type device in series, the second device does not recognize it as a valid low and does not propagate it as a buffered low.

The device contains a power-up control circuit that sets an internal latch to prevent the output circuits from becoming active until  $V_{CC}$  is at a valid level ( $V_{CC} = 2.3$  V).

As with the standard I<sup>2</sup>C system, pullup resistors are required to provide the logic high levels on the buffered bus. The PCA9515B has standard open-collector configuration of the I<sup>2</sup>C bus. The size of the pullup resistors depend on the system; however, each side of the repeater must have a pullup resistor. The device is designed to work with Standard Mode and Fast Mode I<sup>2</sup>C devices in addition to SMBus devices. Standard Mode I<sup>2</sup>C devices only specify a 3 mA termination current in a generic I<sup>2</sup>C system where Standard Mode devices and multiple masters are possible. Under certain conditions, high termination currents can be used.

**TERMINAL FUNCTIONS**

NO.	NAME	DESCRIPTION
1	NC	No internal connection
2	SCL0	Serial clock bus 0
3	SDA0	Serial data bus 0
4	GND	Supply ground
5	EN	Active-high repeater enable input
6	SDA1	Serial data bus 1
7	SCL1	Serial clock bus 1
8	V <sub>CC</sub>	Supply power

**Table 1. FUNCTION TABLE**

INPUT EN	FUNCTION
L	Outputs disabled
H	SDA0 = SDA1, SCL0 = SCL1

## Absolute Maximum Ratings<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V <sub>CC</sub>	Supply voltage range		-0.5	7	V
V <sub>I</sub>	Enable input voltage range <sup>(2)</sup>		-0.5	7	V
V <sub>I/O</sub>	I <sup>2</sup> C bus voltage range <sup>(2)</sup>		-0.5	7	V
I <sub>IK</sub>	Input clamp current	V <sub>I</sub> < 0		-50	mA
I <sub>OK</sub>	Output clamp current	V <sub>O</sub> < 0		-50	mA
I <sub>O</sub>	Continuous output current			±50	mA
	Continuous current through V <sub>CC</sub> or GND			±100	mA
θ <sub>JA</sub>	Package thermal impedance <sup>(3)</sup>	DGK package		172	°C/W
T <sub>stg</sub>	Storage temperature range		-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
- (3) The package thermal impedance is calculated in accordance with JESD 51-7.

## Recommended Operating Conditions

			MIN	MAX	UNIT
V <sub>CC</sub>	Supply voltage		2.3	3.6	V
V <sub>IH</sub>	High-level input voltage	SDA and SCL inputs	0.7 × V <sub>CC</sub>	5.5	V
		EN input	2	5.5	
V <sub>IL</sub> <sup>(1)</sup>	Low-level input voltage	SDA and SCL inputs	-0.5	0.3 × V <sub>CC</sub>	V
		EN input	-0.5	0.8	
V <sub>ILc</sub> <sup>(1)</sup>	SDA and SCL low-level input voltage contention		-0.5	0.4	V
I <sub>OL</sub>	Low-level output current	V <sub>CC</sub> = 2.3 V		6	mA
		V <sub>CC</sub> = 3 V		6	
T <sub>A</sub>	Operating free-air temperature		-40	85	°C

- (1) V<sub>IL</sub> specification is for the EN input and the first low level seen by the SDAx and SCLx lines. V<sub>ILc</sub> is for the second and subsequent low levels seen by the SDAx and SCLx lines. V<sub>ILc</sub> must be at least 70 mV below V<sub>OL</sub>.

## Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS		V <sub>CC</sub>	MIN	TYP <sup>(1)</sup>	MAX	UNIT
V <sub>IK</sub>	Input diode clamp voltage	I <sub>I</sub> = -18 mA		2.3 V to 3.6 V	-1.2			V
V <sub>OL</sub>	Low-level output voltage	SDAx, SCLx	I <sub>OL</sub> = 20 μA or 6 mA	2.3 V to 3.6 V	0.4	0.5	0.6	V
V <sub>OL</sub> - V <sub>ILc</sub>	Low-level input voltage below low-level output voltage	SDAx, SCLx	I <sub>I</sub> = 10 μA	2.3 V to 3.6 V	70			mV
I <sub>CC</sub>	Quiescent supply current	Both channels high, SDAx = SCLx = V <sub>CC</sub>		2.7 V	0.5	3	mA	
				3.6 V	0.5	3		
		Both channels low, SDA0 = SCL0 = GND and SDA1 = SCL1 = open; or SDA0 = SCL0 = open and SDA1 = SCL1 = GND		2.7 V	1	4		
				3.6 V	1	4		
In contention, SDAx = SCLx = GND		2.7 V	1	4				
		3.6 V	1	4				
I <sub>I</sub>	Input current	SDAx, SCLx	V <sub>I</sub> = 3.6 V	2.3 V to 3.6 V	±1			μA
			V <sub>I</sub> = 0.2 V		3			
		EN	V <sub>I</sub> = V <sub>CC</sub>		±1			
			V <sub>I</sub> = 0.2 V		-10	-20		
I <sub>off</sub>	Leakage current	SDAx, SCLx	V <sub>I</sub> = 3.6 V	0 V	0.5			μA
			V <sub>I</sub> = GND		0.5			
I <sub>I(ramp)</sub>	Leakage current during power up	SDAx, SCLx	V <sub>I</sub> = 3.6 V	0 V to 2.3 V	1			μA
C <sub>in</sub>	Input capacitance	EN	V <sub>I</sub> = 3 V or GND	3.3 V	7	9	pF	
		SDAx, SCLx		EN = H	3.3 V	7		9

 (1) All typical values are at nominal supply voltage (V<sub>CC</sub> = 2.5 V or 3.3 V) and T<sub>A</sub> = 25°C.

## Timing Requirements

 over recommended operating free-air temperature range (unless otherwise noted) (see [Figure 1](#))

		V <sub>CC</sub> = 2.5 V ± 0.2 V		V <sub>CC</sub> = 3.3 V ± 0.3 V		UNIT
		MIN	MAX	MIN	MAX	
t <sub>SU</sub>	Setup time, EN↑ before Start condition	100		100		ns
t <sub>H</sub>	Hold time, EN↓ after Stop condition	130		100		ns

## Switching Characteristics

 over recommended operating free-air temperature range, C<sub>L</sub> ≤ 100 pF (unless otherwise noted)

PARAMETER		FROM (INPUT)	TO (OUTPUT)	V <sub>CC</sub> = 2.5 V ± 0.2 V			V <sub>CC</sub> = 3.3 V ± 0.3 V			UNIT
				MIN	TYP <sup>(1)</sup>	MAX	MIN	TYP <sup>(1)</sup>	MAX	
t <sub>PZL</sub>	Propagation delay time <sup>(2)</sup>	SDA0, SCL0 or SDA1, SCL1	SDA1, SCL1 or SDA0, SCL0	45	82	130	45	68	120	ns
t <sub>PLZ</sub>				33	113	190	33	102	180	
t <sub>tHL</sub>	Output transition time <sup>(2)</sup> (SDAx, SCLx)	80%	20%	57			58			ns
t <sub>tLH</sub>		20%	80%	148			147			

 (1) All typical values are at nominal supply voltage (V<sub>CC</sub> = 2.5 V or 3.3 V) and T<sub>A</sub> = 25°C.

(2) Different load resistance and capacitance alter the RC time constant, thereby changing the propagation delay and transition times.

PARAMETER MEASUREMENT INFORMATION

TEST	S1
$t_{PLZ}/t_{PZL}$	$V_{CC}$

TEST CIRCUIT FOR OPEN-DRAIN OUTPUT

VOLTAGE WAVEFORMS  
PROPAGATION DELAY AND OUTPUT TRANSITION TIMES

- A.  $R_T$  termination resistance should be equal to  $Z_{OUT}$  of pulse generators.
- B.  $C_L$  includes probe and jig capacitance.
- C. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 10$  MHz,  $Z_O = 50 \Omega$ , slew rate  $\geq 1$  V/ns.
- D. The outputs are measured one at a time, with one transition per measurement.
- E.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .
- F.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
- G.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .

Figure 1. Test Circuit and Voltage Waveforms

## APPLICATION INFORMATION

A typical application is shown in Figure 2. In this example, the system master is running on a 3.3-V bus, while the slave is connected to a 5-V bus. Both buses run at 100 kHz, unless the slave bus is isolated. If the slave bus is isolated, the master bus can run at 400 kHz. Master devices can be placed on either bus.

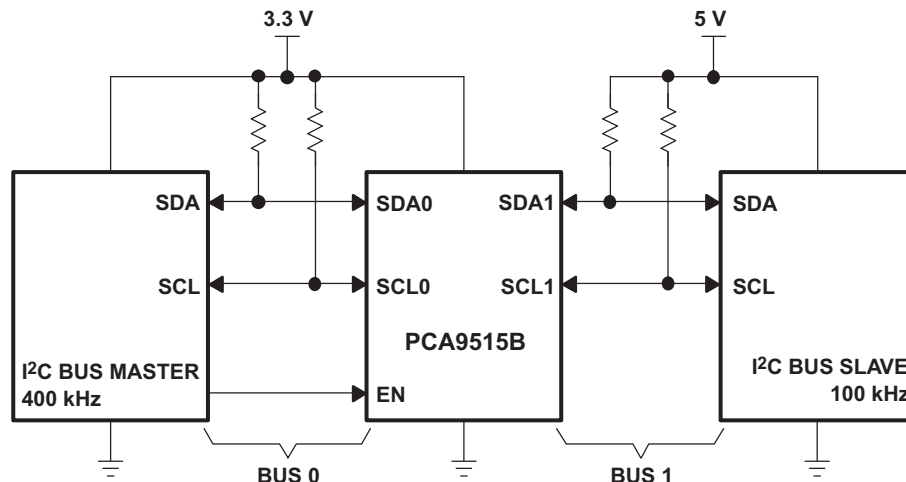

Figure 2. Typical Application

The PCA9515B is 5.5-V tolerant, so it does not require any additional circuitry to translate between the different bus voltages.

When one side of the PCA9515B is pulled low by a device on the I<sup>2</sup>C bus, a CMOS hysteresis-type input detects the falling edge and causes an internal driver on the other side to turn on, thus causing the other side also to go low. The side driven low by the PCA9515B has a typical value of  $V_{OL} = 0.5$  V.

Figure 3 and Figure 4 show the waveforms that are seen in a typical application. If the bus master in Figure 2 writes to the slave through the PCA9515B, Bus 0 has the waveform shown in Figure 3. The waveform looks like a normal I<sup>2</sup>C transmission until the falling edge of the eighth clock pulse. At that point, the master releases the data line (SDA) while the slave pulls it low through the PCA9515B. Because the  $V_{OL}$  of the PCA9515B typically is around 0.5 V, a step in the SDA is seen. After the master has transmitted the ninth clock pulse, the slave releases the data line.

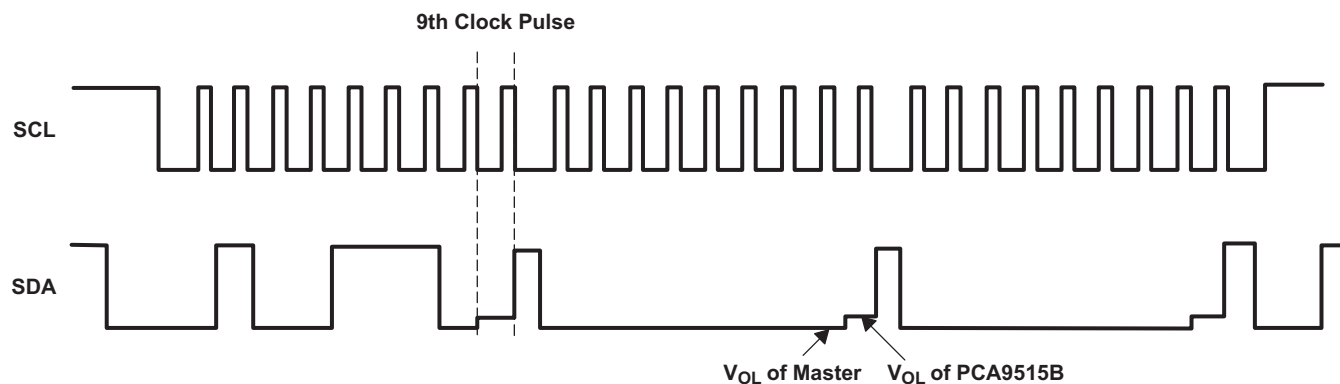

Figure 3. Bus 0 Waveforms

**Figure 4. Bus 1 Waveforms**

On the Bus 1 side of the PCA9515B, the clock and data lines have a positive offset from ground equal to the  $V_{OL}$  of the PCA9515B. After the eighth clock pulse, the data line is pulled to the  $V_{OL}$  of the slave device, which is very close to ground in the example.

**PACKAGING INFORMATION**

Orderable Device	Status <sup>(1)</sup>	Package Type	Package Drawing	Pins	Package Qty	Eco Plan <sup>(2)</sup>	Lead/ Ball Finish	MSL Peak Temp <sup>(3)</sup>	Samples (Requires Login)
PCA9515BDGKR	ACTIVE	MSOP	DGK	8	2500	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 per end.
  - D. Body width does not include interlead flash. Interlead flash shall not exceed 0.50 per side.
  - E. Falls within JEDEC MO-187 variation AA, except interlead flash.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
